

Uddannelsesmuligheder efter folkeskole

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Canada. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in Danish.

What educational path would you recommend for me?

That's a great question—and it's fantastic that you're thinking carefully about your next step! Let's break it down so I can give you a recommendation tailored to your situation.

Your situation

- You're 16 and just finished *folkeskole* (primary/lower secondary school).
- You're fluent in Danish.
- You have Danish and Canadian background—this could open international opportunities.
- You're deciding what's next: education, work, or other paths.

Educational paths available after primary school in Denmark

Here are your main options:

Gymnasiale uddannelser (upper secondary school)

These are academic programs that prepare you for university:

- **STX (studentereksamen)** – general upper secondary, broad mix of humanities, sciences, and arts.
- **HHX (handelsgymnasiet)** – business and economics focus.
- **HTX (teknisk gymnasium)** – focus on science, technology, and engineering.
- **IB (International Baccalaureate)** – international program taught in English, great if you're considering studies abroad (Canada?).

Erhvervsuddannelser (vocational education)

These combine school and apprenticeship (praktik) in a company. For example: electrician, carpenter, chef, healthcare worker. Afterward, you can work or go on to higher education (e.g. erhvervsakademi).

Kombinerede forløb

EUX – combines vocational training with general upper secondary exam, so you can both work in a trade *and* go to university later.

Other options

- **10th grade** – if you want more time to decide or strengthen certain subjects.
- **Efterskole** – often a one-year school focusing on personal development, sports, music, or other interests.

☀️ How to decide?

Here are some things to consider:

- ✓ What subjects interest you most? (e.g. science, business, arts, hands-on work?)
- ✓ Do you think you want to go to university later?
- ✓ Do you like classroom learning or more practical, hands-on learning?
- ✓ Would you like to study/work internationally later on (e.g. Canada)?
- ✓ Do you want to specialize now, or keep your options open?

✨ My general recommendation

- ➔ If you're unsure and want to keep your options open for university (in Denmark or abroad), **STX** or **IB** could be good choices.
- ➔ If you already know you love technology or science, **HTX** is a great choice.
- ➔ If you're interested in business and maybe working internationally, **HHX** fits well.
- ➔ If you prefer to work practically, and perhaps earn while you learn, an **erhvervsuddannelse** or **EUX** can be great.

Since you have a Canadian connection and might want to study abroad, **IB** could be a particularly good fit. It's recognized globally, taught in English, and gives strong preparation for international university studies.

💡 Next step

I can help you:

- Compare specific schools near you.
- Look at entrance requirements.
- Plan how to apply.

If you tell me your interests (e.g. what subjects you enjoy most), I can give a more personalized suggestion! Would you like to share that? 😊
