

Uddannelsesmuligheder efter folkeskole

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Central African Republic. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

Thank you for sharing your background — it's great that you're thinking carefully about your next step! Since you've finished primary school in Denmark (which usually means *folkeskole* up to 9th or 10th grade, depending), you now have several good options depending on your interests, strengths, and future goals. Let's break it down so you can reflect:

Key factors to consider

- **What subjects do you enjoy most?** (e.g., science, languages, creative arts, practical tasks, business)
- **Do you prefer hands-on learning or academic study?**
- **Are you thinking about university in the future, or would you like to start working earlier?**
- **Do you want to explore vocational skills or general studies first?**

Main educational paths after primary school in Denmark

Here are the typical options for students in your position:

Gymnasiale uddannelser (General upper secondary education — if you want to keep university options open)

- **STX (Alment gymnasium)** → Broad academic education with focus on humanities, science, social science or language tracks. Good if you enjoy a mix of subjects.
- **HHX (Higher commercial exam)** → Focus on business, economics, international trade. Good if you are interested in business or entrepreneurship.
- **HTX (Higher technical exam)** → Focus on science, technology, IT, and engineering subjects. Great for tech-minded students.
- **HF (Higher preparatory exam)** → A shorter (2-year) upper secondary program, good for adults or students who want a more practical academic path.

 *These all prepare you for university (or higher education).*

Erhvervsuddannelser (Vocational education and training — EUD)

- Combines school and apprenticeship/work in a company. You can train for professions like electrician, carpenter, chef, hairdresser, social/health worker, IT supporter, etc.
- Many vocational programs can also be combined with a **EUX**, where you get both a vocational qualification *and* the academic level to access higher education.

✓ *Ideal if you want practical skills, a job sooner, or to mix work and study.*

☀️ How to choose?

Since you're fluent in Danish and have cultural ties both in Denmark and Central Africa, you might also think about:

- Do you want an international career?
 - Do you like working with people, technology, business, or creativity?
 - Would you enjoy study-heavy years now, or more applied, real-world learning?
-

👣 Next step suggestions

👉 **Visit open house events (åbent hus) at gymnasiums and vocational schools near you** — it's a great way to feel the atmosphere.

👉 **Talk to a guidance counselor (UU-vejleder)** — they can help you reflect and plan.

👉 **Try short internships (praktik)** — many schools or job centers can arrange this so you can "taste" a profession.

💡 Final thought

If you like academic study and want to keep many doors open (e.g., for university, international study), STX, HHX or HTX could be best.

If you want hands-on experience and a quicker path to work (with option for further study later), consider EUD or EUX.

If you want, I can:

- ✓ Help you compare specific schools or programs in your area
- ✓ Suggest fields that fit your interests
- ✓ Help you map a path to a particular career (e.g., doctor, engineer, designer, etc.)

Would you like to tell me a bit more about what you enjoy or dream of doing? 🚀
