

Uddannelsesmuligheder efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Congo. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

That's a great and thoughtful question — and it's fantastic that you're considering your future at this important moment! Since you've just completed primary school (which I assume means *folkeskolen*, including 9th or 10th grade), you now have several good options in the Danish education system. Let's break it down:

🎓 Your main educational paths after primary school

Here are the most common directions people take:

1 Gymnasiale uddannelser (Upper Secondary School / High School)

If you enjoy academic subjects and are possibly interested in university later, these are good options:

- **STX (Alment gymnasium)** – broad academic subjects, including languages, science, humanities.
- **HHX (Handelsskolens gymnasium)** – focus on business, economics, and languages.
- **HTX (Teknisk gymnasium)** – focus on technology, science, and IT.
- **HF (Højere forberedelseseksamen)** – shorter (2 years), more focused on adults and people who want a practical and academic mix.

👉 **Best for:** If you're interested in university or higher education.

2 Erhvervsuddannelser (Vocational education and training / VET)

If you like practical work and want to start working sooner, but still with opportunities for further education:

- Examples: carpenter, electrician, hairdresser, healthcare assistant, IT supporter.
- Combines school periods with work placements (*praktik*).

👉 **Best for:** If you want to learn a trade, get a job faster, and still have pathways to further education (e.g., *EUX*, which combines VET with high school level courses).

3 EUX (Vocational + academic)

A combination where you get both a vocational qualification **and** a gymnasium-level exam. This keeps doors open for university and gives you a profession.

👉 **Best for:** If you want both practical skills and the possibility to study at university.

💡 How to choose?

Consider:

- ✓ **What subjects excite you?** Are you more into academic subjects (math, languages, science), or do you prefer hands-on tasks (working with tools, helping people, creating things)?
 - ✓ **Do you want to go to university later?** If yes → gymnasium or EUX.
 - ✓ **Do you want to work sooner?** If yes → vocational training or EUX.
 - ✓ **Do you want a mix of theory and practice?** EUX or certain VET programmes could suit you.
-

🌟 Extra thoughts for you

- Being bilingual/multicultural is a strength. You might enjoy programs with international aspects (e.g., HHX or STX with languages).
 - In Denmark, there's good flexibility: you can switch paths if you find out one isn't right.
 - It's a good idea to visit *uddannelsesmesser* (education fairs), talk to guidance counselors (*UU-vejleder*), or even try *brobygning* (intro courses).
-

👉 My recommendation (general)

Since you're still exploring and fluent in Danish, you might consider starting at **STX, HHX, or HTX**, unless you're already sure about a trade. These keep many doors open.

If you'd like, I can help you:

- Make a pros/cons list for specific schools or fields.
- Look at what schools/programs are near your area.
- Explore what matches your interests best (tell me what you like!).

Would you like help narrowing it down based on your interests, hobbies, or career ideas? 😊
