

Uddannelsesvalg i Danmark

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Croatia. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

That's a thoughtful question—great that you're already thinking ahead! Let's break it down so you can explore what suits *you* best. Since you're 16, fluent in Danish, and just finished primary/lower secondary school (Folkeskole), you're at the typical point for deciding between different upper secondary education paths in Denmark. Your options depend on your interests, strengths, and future goals. Let's go through them:

General upper secondary education (Gymnasiale uddannelser)

These are good if you want to keep many doors open for university or higher education later.

- ✓ **STX (Alment gymnasium)** – The most common, with a broad mix of sciences, humanities, and social sciences. Great if you want flexibility and aren't sure yet what to study later.
- ✓ **HHX (Handelsgymnasium)** – Focus on business, economics, and international studies. Could suit you if you're interested in commerce or international relations (maybe with your Croatian-Danish background this appeals?).
- ✓ **HTX (Teknisk gymnasium)** – Emphasizes technology, natural sciences, and innovation. Ideal if you're into science, technology, engineering, or design.
- ✓ **HF (Højere Forberedelseseksamen)** – A shorter, 2-year program (often for those a bit older or looking for a more practical academic path).

Vocational education and training (Erhvervsuddannelser, EUD)

If you want to learn a trade or profession while combining school and apprenticeship.

- ✓ Good for practical learners who want to start working sooner (e.g., as electrician, carpenter, chef, healthcare assistant).
- ✓ You can later build on this with further education or take the EUX, which combines vocational training with a general upper secondary exam—so you can still apply to university later.

☀ Things to consider before you decide

- **What are your interests?** Do you prefer theory, practice, or a mix?
- **Do you have an idea of a future career?** Even a vague idea helps!
- **Do you like school and studying?** Gymnasiale uddannelser can be more academic; EUD is more hands-on.

- **Would you like to explore international opportunities?** HHX or STX with language focus might support that.
 - **Do you want to go to university later?** Then STX, HHX, HTX, or EUD are good bets.
-

✨ **My recommendation (based on what you've shared)**

Since you've completed Danish primary school and are fluent in Danish, and with your multicultural background:

- ➔ **If you're not sure what to study later and want to keep doors open:** STX (broadest option)
 - ➔ **If you're interested in business, languages, or international work:** HHX
 - ➔ **If you're passionate about technology or science:** HTX
 - ➔ **If you're more into learning a trade and starting work sooner:** EUD (with optional EUD if you want a study path too)
-

If you tell me more about:

- 👉 subjects you enjoy (e.g., math, languages, science, creative arts)
- 👉 what kind of work you could imagine doing
- 👉 whether you see yourself studying further after gymnasium

... I can give you even more tailored advice!
