

Uddannelsesmuligheder i Danmark

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Czechia. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

Thank you for sharing a bit about your background — that's very helpful! Since you're 16, just finished primary school (I assume **folkeskole** or equivalent), and are fluent in Danish, you have several good options in Denmark's educational system. Let's look at the main paths and how you might choose among them:

🎓 Your main options after primary school

In Denmark, after 9th or 10th grade, most students choose between:

1 General upper secondary education (Gymnasiale uddannelser)

- **STX (Alment gymnasium):** Broad academic education — good if you want to keep options open for university.
- **HHX (Handelsgymnasium):** Focus on business, economics, and international trade.
- **HTX (Teknisk gymnasium):** Emphasis on technology, science, and innovation.
- **HF (Højere forberedelseseksamen):** A 2-year program — more practical, often for students who want a shorter path to higher education or didn't like traditional schooling.

2 Vocational education and training (Erhvervsuddannelser / EUD)

- Combines school and apprenticeship. Great if you want hands-on learning and to enter the job market more quickly — e.g., as a carpenter, electrician, chef, hairdresser, etc.
- Denmark's VET programs are respected, and you can later build on them (e.g., through **EUX**, which combines vocational training and a general upper secondary exam).

💡 How to choose?

Here are some questions to guide your decision:

- **Do you enjoy academic subjects?** If yes → STX, HHX, HTX, or HF.
- **Are you interested in practical skills, working with your hands, or learning a trade?** If yes → EUD or EUX.
- **Do you know what you want to study or work with later?**
 - If no → STX or HTX might be best for keeping options open.

- If yes (e.g., business, tech, craftsmanship) → pick a more focused path.
- **Do you like school structure or prefer learning by doing?**

Special consideration: Czech background

Since you have Czech roots, you might also think about:

- Taking language classes in Czech or another language to build bilingual skills (valuable for jobs or future studies).
- Considering international opportunities later — some gymnasiums or HHX/HTX schools offer international or bilingual programs.

My general recommendation

→ If you enjoy school and want to keep many options open:

STX or **HTX** (especially if you like science/technology).

→ If you want practical learning + a path to a skilled job (with the option to pursue further studies later):

EUX (gives both a vocational qualification and general upper secondary exam).

→ If you are business-minded:

HHX could suit you well.

Final tip

Most schools offer **introductory visits**, open houses (åbent hus), or short trial periods (**brobygning**) — I recommend you try these! They can really help you feel what's right.

If you want, I can help you:

- ✓ Make a pros/cons list for different paths
- ✓ Explore specific schools in your region
- ✓ Plan how to combine education with interests like languages, sports, arts

Would you like that? Or do you want help narrowing it down further? 😊
