

Uddannelsesmuligheder efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Equatorial Guinea. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?,

Thank you for sharing a bit about yourself! It's great that you're thinking carefully about your next step after primary school. Since you're 16 and have just completed primary school in Denmark, it sounds like you might be at the point where you're choosing between different youth education paths (ungdomsuddannelser). Let's break it down to help you decide!

Key factors to consider

- **Your interests:** What subjects or activities do you enjoy most? (e.g., math, science, languages, arts, technology, working with your hands, helping people)
- **Your strengths:** What are you good at academically or practically?
- **Your future goals:** Do you already have a career in mind? Or do you want to keep your options open?
- **Learning style:** Do you prefer theory (classroom learning) or practical, hands-on training?

Main educational options in Denmark after primary school

Here are the typical paths you could consider:

Gymnasiale uddannelser (General upper secondary education)

These are for you if you like academic subjects and may want to go to university later.

- **STX (Studentereksamen)** — Broad focus with humanities, social sciences, and natural sciences.
- **HHX (Higher commercial exam)** — Focus on business, economics, and international trade.
- **HTX (Higher technical exam)** — Focus on technology, science, and innovation.
- **HF (Higher preparatory exam)** — A bit shorter (2 years) and more flexible, often for those who want university access without 3 years of gymnasium.

 **Good for:** Keeping many doors open, going to university, academic interests.

Erhvervsuddannelser (Vocational education and training / EUD)

- Combines school with apprenticeship (praktik) in a company.

- Leads to skilled jobs (e.g., electrician, carpenter, chef, hairdresser, IT support).
- You can continue to higher education afterwards via erhvervsakademi or professional bachelor programs.

✓ **Good for:** If you want to learn a trade, get a job quickly, or like practical learning.

3 Kombinerede forløb

- **EUX** — Combines vocational education with gymnasium-level studies so you can both learn a trade and qualify for university.
- **10th grade (10. klasse)** — Some students choose an extra year to become more ready for youth education (offered at schools, efterskole, or production schools).

✓ **Good for:** Those who want both practical and academic qualifications.

☀ Special opportunities

Since you have roots in Equatorial Guinea, you might also:

- Explore international studies (e.g., IB – International Baccalaureate).
- Use your bilingual or multicultural background as a strength — e.g., studying languages, international business, or global studies.

💡 Recommendation

If you:

- **Like academic work and want to keep university as an option:** STX or HHX could be great.
- **Enjoy technology and science:** HTX might fit you well.
- **Prefer hands-on work but want academic options too:** EUX is an excellent choice.
- **Want to go straight into learning a trade:** EUD (vocational program) could be right.
- **Feel unsure or want more time to decide:** A year of 10th grade (e.g., at an efterskole) might help you grow personally and academically.

✍ Next step

👉 I can help you:

- Make a pros/cons list of your top options.
- Explore specific schools or programs near where you live.
- Draft questions to ask at school open house events (åbent hus).

If you tell me a bit more about your interests, I can give more tailored advice! What subjects do you enjoy most? Do you already have a dream job in mind?
