

Uddannelsesmuligheder efter folkeskole

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Eswatini. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

Thank you for sharing a bit about yourself — that helps me give a thoughtful answer! Since you just finished primary school in Denmark (which typically ends around age 16 if you're including *folkeskole* up through 9th or 10th grade), you're at an exciting point where you can choose between different educational paths depending on your interests, strengths, and future goals. Let's break down the main options and what to consider:

🎓 General Upper Secondary Education (Gymnasiale uddannelser)

If you enjoy academic subjects and think you might want to go to university:

- **STX (Almen studentereksamen)** – Focuses on general academic subjects like languages, sciences, and humanities.
- **HHX (Højere handelseksamen)** – Focuses on business, economics, and international studies.
- **HTX (Højere teknisk eksamen)** – Focuses on technical and science subjects.
- **HF (Højere forberedelseeksamen)** – A shorter 2-year option (often for students who want a different pace or environment), also qualifying for university.

✓ Good if:

- You enjoy studying and want to keep your options open.
- You're interested in university or higher education later.
- You're not yet sure about a specific job or profession.

⚙️ Vocational Education and Training (Erhvervsuddannelser, EUD)

If you want a more practical, hands-on path leading directly to a profession:

- Combines school and apprenticeships (praktik) in areas like carpentry, health care, IT, gastronomy, mechanics, etc.
- You can always choose to take *EUX* — which combines vocational training with subjects that give you university entrance qualifications.

✓ Good if:

- You want to learn a trade or profession and start working sooner.

- You prefer learning by doing rather than lots of theoretical study.

Things to consider in your choice

- **What are your interests?** Do you prefer academic study or practical learning? What subjects excite you?
- **Do you have a dream job or field?** If not, that's okay! But think about what you might enjoy: business, science, technology, health, crafts?
- **Would you like to study abroad one day or stay in Denmark?**
- **Do you enjoy working with people, solving problems, creating things, or leading?**

My suggestion

Since you're fluent in Danish, born and raised in Denmark, and have a multicultural background (which is a strength!), you can thrive in any of these paths.

-  If you like learning broadly and want flexibility, **STX or HHX** could be great choices.
-  If you're interested in technology or science, **HTX** is worth considering.
-  If you prefer hands-on, real-world work and want to get started on a career path, look at **EUD/EUX** programs.

Next step

I recommend:

- ✓ **Visit educational fairs or open house days** at local gymnasiums and vocational schools.
- ✓ **Talk to your school counselor (*uddannelsesvejleder*)** — they can give guidance specific to your strengths.
- ✓ **Try out "brobygning" (bridge-building courses)** — short trial courses that let you experience different schools.

If you want, I can help you:

- Make a pros/cons list for the options you're considering.
- Explore what schools near you offer.
- Look at job prospects for different paths.

Would you like help with that? And do you already have some ideas about what subjects or careers interest you?
