

Uddannelsesmuligheder i Danmark

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Ethiopia. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

It's great that you're thinking carefully about your next steps — and congratulations on finishing primary school! Since you're in Denmark and have just completed **folkeskolen**, I can help you think through your options. Here's a clear overview, and I'll also offer some guidance based on your situation.

🎓 Your main educational paths after primary school in Denmark

In Denmark, after primary/lower secondary school, most young people choose between these two types of upper secondary education:

1 General upper secondary education (Gymnasiale uddannelser)

If you enjoy academic subjects and might want to go to university later, this is a good path. There are several types:

- **STX (Almen studentereksamen)** – broad and academic, focuses on languages, humanities, science, and social studies.
- **HHX (Højere handelseksamen)** – focused on business, economics, marketing, and international trade.
- **HTX (Højere teknisk eksamen)** – focuses on technical subjects, technology, and natural sciences.
- **HF (Højere forberedelseksamen)** – shorter (2 years), more practical, for students who want university access but maybe prefer a less theoretical approach.

✅ Good for you if:

- You like studying a broad range of subjects.
- You're considering university or higher education later.
- You're curious about specific academic fields (e.g., science, languages, business).

2 Vocational education and training (Erhvervsuddannelser / EUD)

If you prefer learning by doing, and want to combine school and apprenticeship in a company (praktikplads), vocational education could be ideal.

Examples of professions:

- Electrician, carpenter, chef, hairdresser, health care assistant, IT-supporter.

✓ Good for you if:

- You want to start working sooner.
- You like practical, hands-on learning.
- You have a specific trade or profession in mind.

☀ Factors to consider

Since you're bilingual and have multicultural roots, you might have extra strengths, such as:

- Cross-cultural understanding and language skills.
- Flexibility and adaptability.
- Maybe interest in international relations, global business, languages, or social work.

You could think about:

- What subjects you enjoy most (math, science, languages, arts, technology, etc.)
- Whether you prefer practical tasks or theoretical study.
- If you see yourself at university later — or starting a job earlier.

🚀 My suggestion

Since you're fluent in Danish and grew up here, all paths are open to you. But based on your age and the fact you're still exploring:

👉 Consider starting with STX or HHX

These give you a solid general education and time to discover your interests while keeping many doors open — including university or business school later.

👉 Or if you already have a passion (e.g. cooking, IT, carpentry)

Then an **EUD** path could be a fantastic fit.

👉 Optional: EUX (vocational + general)

If you're interested in both, look at **EUX** — it combines vocational training with the option for higher education.

💡 Final tip

It's a good idea to:

- Visit some local schools (many offer open houses or information evenings).
- Talk to a **UU-vejleder** (youth education counselor) — they can help you map out your options.
- Maybe do a short internship (praktik) to explore a field.

If you tell me more about your interests (what subjects you like, what kind of job you dream of), I can give an even more personalized recommendation! Want to share? 😊
