

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Greece. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

Thanks for sharing a bit about yourself — that really helps me guide you better. Since you're 16 and have just finished **primary school in Denmark**, your next step is usually to choose between a few educational paths in the **upper secondary education system (ungdomsuddannelse)**. The best path depends on your **interests, strengths, and long-term goals**.

Here's a breakdown of your main options:

1. Gymnasiale uddannelser (General Upper Secondary Education)

These are academically oriented programs that prepare you for university. Good if you enjoy school subjects and want to study more later.

- **STX (Alment Gymnasium):** Broad education – focus on humanities, natural sciences, and social sciences.
- **HHX (Handelsskolen):** Business-oriented – economics, marketing, and international trade.
- **HTX (Teknisk Gymnasium):** Technical and scientific – focus on technology, science, and innovation.
- **HF (Højere Forberedelseseksamen):** A shorter 2-year general education program, more practical and flexible.

 *Recommended if you're:*

- Interested in going to university
- Unsure exactly what to do yet
- Academically inclined

2. Erhvervsuddannelser (Vocational Education and Training, EUD)

These combine school and apprenticeship in a company. You get a trade or profession (e.g. carpenter, electrician, chef, child care worker).

- Takes 3–5 years depending on the program
- You can work right after, or continue to higher education if you want

 *Recommended if you're:*

- More hands-on and practical
- Want to start working sooner
- Interested in a specific profession

3. EUX – A Combination of Vocational and Academic

This is a mix of **EUD and Gymnasiale uddannelser**. You get a vocational education *and* a study qualification to go to university.

👉 *Recommended if you:*

- Want a profession *and* the option to study at university
- Are motivated and can handle a busy schedule

Questions to ask yourself:

- Do I enjoy academic school subjects? (→ STX, HHX, HTX)
- Do I want to work with my hands or in a specific trade? (→ EUD)
- Do I want to keep my options open with both work and university paths? (→ EUX)
- What are my interests? (e.g. technology, people, business, health)

A Greek-Danish Perspective

Since you have a multicultural background, you might also:

- Explore **language-related programs** (Danish, Greek, or English as focus areas)
- Use your background for a career in **international business, translation, or cultural work**
- Later study abroad, or work in EU-related fields (you're in a good position for that!)

My Recommendation (based on what you've shared):

If you're still unsure what you want to do but are comfortable with schoolwork and want to keep doors open:

➡ **STX** is a solid, general path. You'll have 3 years to explore different subjects and think more about what you want to study or do.

If you already know you're interested in **technology or science**:

➡ **HTX** is a great fit.

If you want **real work experience** while still keeping the door open for university:

➡ **EUX** is a strong, flexible option.

Would you like help choosing based on what you enjoy most (e.g. math, creative subjects, working with people, etc.)? If you tell me more about your interests, I can tailor the advice further.
