

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Greece. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

That's a great and important question – and it's good that you're thinking seriously about your next steps.

In Denmark, after finishing **primary/lower secondary school (folkeskole)**, you generally have a few main educational options depending on your interests, academic strengths, and future goals. Here's a breakdown of your main paths:

1. Gymnasiale uddannelser (General upper secondary education)

These prepare you for university and higher education.

✓ Good if:

- You enjoy academic subjects (like languages, history, science, math, etc.).
- You're interested in possibly going to university.
- You're not yet sure what career you want, and you want to keep your options open.

Main types:

- **STX** (Almen studentereksamen): Broad and traditional. Has focus areas like natural sciences, social sciences, and humanities.
- **HHX** (Højere handelseksamen): Focus on business, economics, and international topics.
- **HTX** (Højere teknisk eksamen): Focus on technical and scientific subjects.
- **HF** (Højere forberedelseseksamen): Shorter (2 years), less theoretical. Good if you want to study but not go the 3-year route.

■ **Recommended if you think you want to go to university later**, or want flexibility.

2. Erhvervsuddannelser (Vocational education and training – EUD)

This is more hands-on and job-oriented. You combine school and apprenticeships with real employers.

✓ Good if:

- You want to work with your hands or a specific craft (e.g. electrician, carpenter, hairdresser, mechanic).
- You prefer practical learning over theory.
- You want to enter the job market earlier.

 **Recommended if you want to learn a trade and start working faster.** You can still continue later to higher education (via *EUX* or other options).

3. EUX (Combination of vocational + academic education)

This lets you both **learn a trade** and also get a **study qualification** (like STX level), so you can apply to university later.

Good if:

- You want a job quickly **but** also want to keep the option open to study further later.
- You're hardworking and can handle a heavier workload (it's more demanding than regular EUD or STX).

 **Recommended if you want the best of both worlds.**

How to decide?

Ask yourself:

- Do I enjoy learning theory (reading, writing, studying)? → STX/HHX/HTX/HF
- Do I want to work with my hands or get a job quickly? → EUD
- Do I want flexibility – maybe study later, but also have a profession? → EUX
- Do I already know what I want to become? If yes, choose a path that leads there.

My general advice for you:

Since you're fluent in Danish, born and raised here, and just finished folkeskole:

- If you enjoy studying, or want to **keep your options open**, **STX or HHX** might be a good next step.
- If you're interested in business (maybe combining your Danish-Greek background?), **HHX** could open up international career options.
- If you're more practical, **EUX** is a strong choice – it gives you a trade *and* a future education option.

If you tell me more about:

- Your favorite subjects
- What kinds of jobs or careers interest you

- Whether you like school / books / hands-on work
...I can give a more tailored recommendation.

Would you like that?
