

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Grenada. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.
What educational path would you recommend for me?

Thanks for sharing that—you're at a really important and exciting point in your life. Since you're 16, just finished primary school (in Denmark that usually means *folkeskole*), and are fluent in Danish, here are your main educational paths in Denmark, along with some thoughts on how you might choose the right one for yourself:

♦ 1. Gymnasiale Uddannelser (General Upper Secondary Education)

These are the most common routes if you want to go to university later.

Options:

- **STX (Alment Gymnasium)** – Focuses on humanities, science, and social science. Broad and academic.
- **HHX (Handelsskolen)** – Focuses on business, economics, and languages.
- **HTX (Teknisk Gymnasium)** – Focuses on science and technology.
- **HF (Højere Forberedelseksamen)** – A 2-year version, more flexible, often chosen by older students or those looking for a shorter route.

✓ Good for you if:

- You enjoy academic subjects.
- You're interested in going to university.
- You want to keep your options open.

♦ 2. Erhvervsuddannelser (Vocational Education and Training, EUD)

These combine school and practical training with a company (apprenticeship). Leads to a skilled trade or profession.

Examples:

- Electrician, carpenter, mechanic, chef, hairdresser, childcare worker, etc.

✓ Good for you if:

- You like working with your hands or learning through doing.
- You want to start working earlier but still have solid skills and a good career.

- You're not too keen on classroom-based learning all the time.

♦ 3. EUX (Combination of Vocational + Academic)

This is a hybrid where you do a vocational education but also get a study-competence certificate (like gymnasium level), so you can still go to university later.

✓ Good for you if:

- You're interested in both practical and academic skills.
- You want the flexibility of doing an apprenticeship but still keeping the door open for higher education.

♦ Some Questions to Help You Choose

1. What are you good at or enjoy doing?

- Do you enjoy working with people, numbers, building things, solving problems?

2. Do you want to go to university later?

- If yes, STX/HHX/HTX/HF or EUX is better.
- If no, vocational (EUD) might be a more direct route.

3. Do you want to start working and earning earlier?

- Vocational paths start earlier with apprenticeships.

4. Do you enjoy school?

- If not really, a more practical route might be better for your motivation.

♦ My Recommendation (Based on What You Said)

Since you've just finished primary school and didn't mention a strong preference yet, I suggest looking at:

- **STX** – if you're interested in a broad education and keeping many doors open.
- **EUX** – if you think you might enjoy a mix of hands-on and academic learning.
- **EUD** – if you already know you like practical work (maybe in tech, crafts, or service fields).

It would also be a great idea to:

- Talk to a **UU-vejleder (Youth Guidance Counselor)** in your kommune.
- Attend **open houses (åbent hus)** at local schools.
- Try a **brobygning (bridging course)** or **praktik (internship)** to test what feels right.

Would you like help figuring out what areas you're most interested in (like a mini career quiz)? Or do you already have something in mind, like business, technology, arts, or healthcare?
