

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Guatemala. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.
What educational path would you recommend for me?

Thanks for sharing that! It's great that you're fluent in Danish and just finished primary school — this is a key moment to think about your strengths, interests, and future goals.

In Denmark, after primary school (**folkeskolen**), you typically have a few different **educational paths** to choose from, depending on your academic interests and career goals. Here are the main ones:

1. Gymnasium (STX, HHX, HTX) – General Upper Secondary Education

Duration: 3 years

Goal: Prepares you for higher education (university or university college)

- **STX** (Almen Studentereksamen): Broad, academic education. Good if you like subjects like literature, history, languages, science.
- **HHX** (Handelsskolens Studentereksamen): Focuses on business, economics, and international topics. Great if you're interested in commerce or entrepreneurship.
- **HTX** (Teknisk Studentereksamen): Focuses on science, technology, and engineering. Good if you're interested in tech, programming, health sciences, etc.

✓ **Recommended if:** You enjoy academic subjects and want to keep your options open for university.

2. Erhvervsuddannelser (EUD) – Vocational Education and Training

Duration: 2–5 years

Goal: Prepares you to enter the job market with practical skills. Combines school and apprenticeship.

- Many paths: carpenter, electrician, chef, social worker, healthcare assistant, mechanic, hairdresser, etc.
- You earn money during your apprenticeship (praktikperiode).

✓ **Recommended if:** You prefer hands-on learning, want to work sooner, or are interested in a specific trade or profession.

3. EUX – Combination of Vocational + General Upper Secondary

Duration: 4–5 years

Goal: Gives you both vocational training **and** a qualification to apply to university.

- For example: You can train to be an electrician **and** study subjects like math and English at a high level.

✓ **Recommended if:** You want both practical experience and the chance to go to university later.

💡 **Some Questions to Ask Yourself**

- Do I like working with my hands or thinking about ideas and theories?
 - Am I more interested in getting a job soon, or studying longer?
 - Do I have a specific career in mind already?
 - Do I enjoy working with people, technology, numbers, or creative tasks?
-

🕒 **My Advice Based on Your Background**

As someone bilingual with Guatemalan roots, you might also consider:

- **Using your language and cultural background** – maybe later working in international business, diplomacy, translation, or teaching.
- **Global skills** are highly valued. HHX (business-focused) or STX (language and social sciences) could give you a strong foundation.

If you're still unsure, many schools offer **introductory courses (brobygning)** or **guidance counselors (UU-vejledning)** to help you try out different paths before choosing.

If you tell me more about your interests (e.g. favorite subjects, hobbies, or dream jobs), I can give a more specific recommendation!
