

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Guinea-Bissau. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

Thanks for sharing that! It's great that you're thinking seriously about your next steps—it puts you in a strong position for your future. Since you've just finished **primary school** in Denmark (which likely means 9th or 10th grade), you're at the stage where you need to choose between several upper secondary education options. Here's a breakdown of your main choices, and I'll include who each path might suit:

1. Gymnasiale uddannelser (General Upper Secondary Education)

➤ STX – Studentereksamen

- **Focus:** Broad, academic subjects (sciences, humanities, languages).
- **Good for:** University preparation. If you're unsure what to study later or want to keep many doors open.
- **Duration:** 3 years

➤ HHX – Higher Commercial Examination

- **Focus:** Business, economics, international trade.
- **Good for:** If you like business, marketing, or international perspectives.
- **Duration:** 3 years

➤ HTX – Higher Technical Examination

- **Focus:** Technology, natural sciences, innovation.
- **Good for:** Future engineers, IT professionals, inventors.
- **Duration:** 3 years

➤ HF – Higher Preparatory Examination

- **Focus:** More practical and less theoretical than STX. Often chosen by those who need a more flexible program.
- **Duration:** 2 years
- **Good for:** People who want to move on to higher education faster or prefer smaller classes.

2. Erhvervsuddannelser (Vocational Education and Training – EUD)

- **Focus:** Hands-on job training (electrician, carpenter, health care, culinary arts, etc.)
- **Structure:** School + apprenticeship at a workplace
- **Good for:** People who want to start working sooner or prefer practical learning
- **Duration:** 2–5 years depending on the field and level

➤ **EUX – Combination of vocational training + academic subjects**

- **Good for:** If you want both practical skills *and* the option to go to university

What to Consider When Choosing

Here are some questions that can help you reflect:

- **What are you naturally good at?** (Math, writing, helping people, building things, etc.)
- **What do you enjoy doing in your free time?** (That can hint at your interests)
- **Do you prefer theoretical or practical learning?**
- **Do you think you want to go to university later?**

Personal Perspective (based on your background)

Since you're fluent in Danish and rooted in two cultures (Danish and Bissau-Guinean), you could use that to your advantage in areas like:

- **International business** (HHX)
- **Global development or political science** (STX)
- **Healthcare or social work** (HF, or vocational paths)
- **Tech and innovation** (HTX or EUX in IT)

Recommendation:

If you're not sure yet and want to keep your options open:

STX or **EUX** would be excellent choices.

If you're already interested in **business or economics**:

HHX will give you a great foundation.

If you enjoy **hands-on work** or know you want a job sooner:

Start with **EUD**, and consider **EUX** if you also want a high school diploma.

Let me know if you have interests in specific areas (like technology, healthcare, design, business, etc.), and I can suggest more tailored paths!
