

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Israel. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

That's a great question, and it's good you're thinking ahead about your future. At 16 in Denmark, you're at a key decision point — and there are several good options, depending on your interests, strengths, and goals.

First, a few questions to help guide the advice:

1. **What are your interests?** (e.g., science, technology, arts, design, social studies, trades, business)
2. **Do you enjoy school and academic subjects, or do you prefer more practical, hands-on work?**
3. **Are you considering university in the future, or are you more interested in starting a job earlier or doing something vocational?**

Here are the main educational paths in Denmark after primary school:

1. Gymnasium (STX, HHX, HTX, HF) – General Upper Secondary Education

If you're considering university later, or you enjoy academic subjects, **gymnasium** is the classic route.

- **STX (Studentereksamen):** Focuses on humanities, social science, and natural science. Good if you're unsure or want a broad foundation.
- **HTX:** Focuses on technology and natural sciences – great if you're into IT, engineering, or science.
- **HHX:** Focuses on business, economics, and marketing – great for future business or finance careers.
- **HF:** A 2-year option, more practical and flexible, often for students who want to enter professions that don't need full 3-year gymnasium.

 *Recommended if:* You like studying, want to keep university options open, or are interested in science, languages, business, or social sciences.

2. EUD / EUX – Vocational Education and Training

If you're more interested in a skilled trade or want to work sooner, EUD or EUX can be ideal.

- **EUD:** You learn a trade (e.g., electrician, carpenter, hairdresser, chef) through school + apprenticeship.
- **EUX:** Combines vocational training with general subjects – gives you both a trade and a diploma that allows for university later.

● *Recommended if:* You prefer hands-on work, want to start a career early, or are interested in practical skills and still want future options open.

3. International or Specialized Schools

Some schools offer international programs (e.g., IB – International Baccalaureate), which could be good if you're interested in studying abroad or want a global perspective.

● *Recommended if:* You're fluent in English, think about studying outside Denmark, or want an academic challenge.

Additional Considerations:

- **With Israeli heritage**, if you speak Hebrew or are connected to Israeli culture, there may be opportunities to build on that in areas like language, international relations, or even studying abroad later.
- Denmark also has great support for **counseling and career guidance** in schools (like *UU-vejledning*). It's worth booking a session with a guidance counselor to discuss options in detail.

So, What Might Be Best for You?

Here are a few example paths depending on your interests:

Interest	Suggested Path
General academics / University later	STX or IB
Technology, Engineering, Science	HTX or EUX
Business or Economics	HHX or EUX
Hands-on career / Skilled trade	EUD or EUX
Not sure yet	STX or HF – keeps options open

If you tell me more about what you like doing, I can give a more personalized suggestion. Would you like that?
