

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Kuwait. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

Thanks for sharing your background! Since you're 16, fluent in Danish, and just finished primary school in Denmark (which typically includes **Folkeskole** up to 9th or 10th grade), you're now in a good position to choose one of several educational paths that suit your interests, strengths, and long-term goals.

Here's a breakdown of your main options in Denmark after primary school, with guidance on how to choose:

1. Gymnasiale Uddannelser (General Upper Secondary Education)

These are the academic high school routes, usually lasting 3 years, preparing you for university.

Common types:

- **STX (Studentereksamen)** – General and broad, with options in science, humanities, and social sciences.
- **HHX (Higher Commercial Examination)** – Focus on business, economics, and international trade.
- **HTX (Higher Technical Examination)** – Emphasis on science, technology, and IT.
- **HF (Higher Preparatory Exam)** – 2-year program, more flexible, good if you're unsure or want shorter education before university.

Recommended if:

You enjoy academic learning, are curious about university later, and like subjects like languages, history, science, economics, etc.

2. Erhvervsuddannelser (Vocational Education and Training – EUD)

These are practical programs combining school and apprenticeship (praktik). Typically 3-4 years.

Examples:

- Electrician
- Carpenter
- Hairdresser
- Healthcare assistant (SOSU)
- IT-supporter
- Mechanic
- Chef

You start with **grundforløb** (basic course), then move on to **hovedforløb** with a paid apprenticeship.

Recommended if:

You like hands-on work, want to earn money while studying, and are interested in getting a skilled job without going to university.

 3. Kombinationsuddannelser (EUX)

A combination of vocational training and general upper secondary education.

You get both a vocational qualification **and** access to university.

Recommended if:

You're interested in a practical career but want to keep the door open for university later.

 How to decide?

Ask yourself:

1. **What are my interests?** (e.g., tech, people, design, science, business)
 2. **Do I enjoy schoolwork or hands-on learning more?**
 3. **Do I want to work soon, or study more before starting a job?**
 4. **Do I want to go to university later?**
 5. **Do I want a balance between school and real work (like apprenticeships)?**
-

 Tip:

- Visit **UddannelsesGuiden (ug.dk)** – Denmark's official education site. They have a test called "MinUddannelse" to help you figure out what suits you.
 - Talk to a **Studievejleder (student counselor)** at your local UU-center (Ungdommens Uddannelsesvejledning).
-

 Bonus:

As someone with a multicultural background, you might also consider programs with a global or intercultural angle—like language-focused STX, international business in HHX, or even international schools if you're considering studying or working abroad in the future.

Would you like help figuring out which type fits your interests best? If you tell me more about what subjects or careers you're curious about, I can suggest a more specific path.
