

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Liechtenstein. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.
What educational path would you recommend for me?

Thanks for sharing that—it's great you're thinking ahead about your future. Since you're 16 and just finished primary school in Denmark (which typically ends at 9th or 10th grade), your next step would normally be one of the following main educational paths:

♦ 1. Gymnasiale uddannelser (Upper Secondary Education)

These are general academic programs that prepare you for university. Since you're fluent in Danish and grew up in Denmark, this is a natural option if you're aiming for higher education.

Here are your main options under this track:

Path	Duration	Focus	Typical Outcome
STX (Studentereksamen)	3 years	Broad general education (humanities, sciences, languages)	University admission
HHX (Higher Commercial Examination)	3 years	Business, economics, marketing	Business-related higher education
HTX (Higher Technical Examination)	3 years	Technology, natural sciences	Technical/university programs
HF (Higher Preparatory Exam)	2 years	General education, often for adults or late starters	Shorter university programs or further education

Recommendation:

Choose **STX** if you're not sure what to study later, but want broad options.

Choose **HHX** if you're into economics, business, or entrepreneurship.

Choose **HTX** if you're into science, IT, or engineering.

Choose **HF** if you want a shorter, more flexible route (often includes more mature students).

♦ 2. Erhvervsuddannelser (Vocational Education and Training - EUD)

If you're more into hands-on learning and want to get into a profession quickly, vocational education is a solid choice. It typically combines school with apprenticeship in a company.

Examples:

- Carpenter, electrician, chef
- Health care assistant, mechanic, hairdresser

Duration: 2–5 years depending on the program.

Recommendation:

Great if you're eager to start working soon, want a clear career path, or aren't too interested in

theoretical schoolwork.

♦ 3. Kombineret Uddannelse (EUX)

This hybrid path lets you combine vocational training with general upper secondary education. You get both a trade certificate *and* a study qualification for university.

Duration: ~4–5 years

Ideal if: You're interested in a trade but want to keep university doors open.

What to Consider When Choosing:

1. **What are your strengths?** Are you more academic or practical?
2. **What are your interests?** Do you enjoy science, business, technology, arts?
3. **Do you want to study at university later?**
4. **Would you like to work sooner or later?**
5. **Do you want to keep a connection to Liechtenstein (e.g., study or work there later)?**

If You're Still Unsure:

You might also benefit from:

- **Educational guidance (UU-vejledning)** – available in Denmark for students like you.
- **Bridge-building programs (brobygning)** – short internships or visits to different school types.

Final Advice:

If you're academically inclined and want flexibility, go for **STX**.

If you're into business, choose **HHX**.

If you're more hands-on or career-focused, consider **EUD** or **EUX**.

Let me know your interests or what subjects you liked most in school, and I can give a more personalized suggestion.
