

Uddannelsesmuligheder i Danmark

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Mali. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

That's great that you've just finished primary school — congrats! 🎉 In Denmark, after **folkeskole (primary and lower secondary education)**, you typically choose between different **youth education programs** depending on your interests and future goals. Since you're 16, you're right at the point where these choices matter.

Here's a breakdown of your main options, and some guidance based on your background and possibilities:

🎓 1. Gymnasiale uddannelser (Upper Secondary General Education)

These programs prepare you for **university**. Good if you enjoy academic subjects.

- **STX (Almen studentereksamen)** – Focuses on humanities, natural sciences, and social sciences. Very broad and flexible.
- **HHX (Højere handelseksamen)** – Focus on business, economics, and marketing.
- **HTX (Højere teknisk eksamen)** – Focus on technology, science, and innovation.
- **HF (Højere forberedelseksamen)** – A shorter, 2-year program with a more practical angle. Often chosen by students who want to enter professions like teaching, nursing, or social work.

📌 Recommended if:

- You're interested in university or academic careers.
- You enjoy school subjects and want a wide range of future options.

🔧 2. Erhvervsuddannelser (Vocational Education and Training – EUD)

This is a hands-on, practical education combining **school and apprenticeship** in a company. You become skilled in a trade.

Examples of jobs: electrician, carpenter, IT technician, chef, hairdresser, healthcare assistant, etc.

📌 Recommended if:

- You like learning by doing.
- You want to start working earlier.
- You are interested in specific practical professions.

3. EUX – A mix of vocational training and academic education

You get a **vocational qualification AND a studentereksamen**, which gives you the option to work **or** continue to university.

Recommended if:

- You want flexibility: learn a trade **and** keep the door open for higher education.
- You are willing to work hard (EUX is quite demanding).

So, what should you choose?

Since you're fluent in Danish and have just finished primary school, here are some questions to think about:

- **Do you like school and theory, or do you prefer practical work?**
- **Do you already have an idea of what you want to do in the future?**
- **Are you interested in business, technology, healthcare, or creative work?**
- **Do you want to go to university, or would you rather work sooner?**

My Suggestion (based on what you shared):

If you **enjoy studying and want a broad range of future options**, I'd recommend:

- **STX** if you're open-minded and want to keep all options available.
- **HHX** if you like business, marketing, or economics.
- **HTX** if you're into science, IT, or engineering.

If you **prefer practical learning and want to start a profession sooner**, but still might want higher education later:

- **EUX** is a strong choice — it keeps your options open.

If you're still unsure, it's OK! You can:

- Visit www.ug.dk (official Danish education guide).
- Talk to an **educational counselor (studievejleder)** at your school or local youth guidance center (**ungdommens uddannelsesvejledning, UU**).

Would you like help choosing based on your **interests** (like IT, healthcare, design, business, etc.)? I can help narrow it down if you tell me more!
