

Uddannelsesvalg i Danmark

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Mali. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

Thanks for sharing a bit about yourself — that helps a lot in giving relevant advice.

Since you've just finished primary school in Denmark (which usually ends after 9th or 10th grade), you're at the point where most students choose between different types of upper secondary education. Here's a breakdown of your main options in Denmark, along with guidance based on your background and possible interests:

Main Educational Paths in Denmark After Primary School

1. STX (Studentereksamen) – General Upper Secondary School

- Focus: Broad academic education (languages, social studies, sciences, etc.)
- Duration: 3 years
- Good for: Going to university later, especially if you're not sure yet what you want to study.
- Recommendation: Great choice if you enjoy school subjects like history, biology, literature, etc., and want to keep doors open.

2. HTX (Higher Technical Examination Programme)

- Focus: Science, technology, and innovation.
- Duration: 3 years
- Good for: Students interested in engineering, IT, biotech, or technical careers.
- Recommendation: If you like math, physics, or tech-related subjects, this could be a strong option.

3. HHX (Higher Commercial Examination Programme)

- Focus: Business, economics, marketing, languages.
- Duration: 3 years
- Good for: People interested in finance, international trade, or entrepreneurship.
- Recommendation: If you're curious about business or plan to start your own company someday, this could be a match.

4. EUX (Vocational + Academic)

- Focus: Combines vocational training with subjects that allow you to qualify for higher education.

- Duration: 4-5 years
- Good for: Students who want a job-oriented education but still keep the option of university open.
- Recommendation: Ideal if you want practical skills **and** future academic opportunities.

5. EUD (Vocational Education and Training)

- Focus: Apprenticeships and hands-on skills (e.g. electrician, mechanic, chef, etc.)
- Duration: 2-4 years depending on field
- Good for: Entering the workforce directly with practical skills.
- Recommendation: Best if you're not interested in traditional classroom learning and want to work with your hands or get a job quickly.

How to Choose?

Ask yourself:

- Do I enjoy academic subjects and want to study more in university later? → STX, HTX, HHX
- Do I want a hands-on job or start earning sooner? → EUD or EUX
- Do I enjoy math, science, or tech? → HTX or EUX with a tech focus
- Am I interested in starting a business someday? → HHX

Bonus Tips:

- **Talk to a school counselor (studievejleder):** They can give you personal guidance based on your grades and interests.
- **Visit the schools during open house events (orienteringsaften)** to get a feel for the environment.
- **Check out Ungdommens Uddannelsesvejledning (UU):** They provide help for young people in exactly your situation.

Your Background Matters — in a Good Way

Being Danish-born with Malian roots gives you a valuable perspective. If you're multilingual or connected to different cultures, that can be a real asset in international business, diplomacy, tech, or community work. Don't be afraid to bring your whole identity into your education and future career — it can set you apart in a good way.

Would you like help figuring out which of these paths match your interests? If you tell me what subjects you enjoy or what careers you've thought about, I can give more specific recommendations.
