

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Marshall Islands. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.
What educational path would you recommend for me?

Thanks for sharing that — it's great that you're thinking ahead about your education. Since you've just finished **primary school** in Denmark (which usually ends at 9th or 10th grade), your next step typically falls into one of several **youth education paths**, depending on your interests, strengths, and future goals.

Here's a breakdown of your main options:

1. Gymnasial uddannelse (General Upper Secondary Education)

Best if you're considering university in the future.

Options:

- **STX (Studentereksamen)** – Broad academic program with humanities, sciences, and social studies.
- **HHX (Højere Handelseksamen)** – Focuses on business, economics, and marketing.
- **HTX (Højere Teknisk Eksamen)** – Focuses on technology, science, and engineering.
- **HF (Højere Forberedelseseksamen)** – Shorter (2-year), more flexible academic path, often chosen by slightly older students or those wanting university access without a 3-year program.

Recommended if:

You're academically inclined or interested in going to university in Denmark or abroad.

2. Erhvervsuddannelse (Vocational Education and Training / EUD)

Best if you want to work with your hands, start earning earlier, or become qualified in a skilled trade.

- Combines **school + apprenticeship** with a company.
- You can become anything from a carpenter, electrician, hairdresser, chef, or IT support technician.
- Some programs can lead to **further education** later, especially through **EUX** (a mix of vocational + general education).

Recommended if:

You enjoy practical work and want job skills quickly.

3. EUX – The hybrid path

Combines vocational training with a gymnasium-level academic education.

- A good balance: you get both a trade and eligibility for university.
- Takes a bit longer, but gives flexibility.

Recommended if:

You're not sure yet if you want to go to university or work right away.

How to Decide?

Ask yourself:

- Do you enjoy **schoolwork** and subjects like math, science, languages, or social studies?
 - Are you more interested in **doing practical things**, building, creating, or working with people?
 - Do you want to **go to university**, or would you rather **start working and earning** sooner?
-

Personal Consideration: Marshall Islands background

Since you have roots in the Marshall Islands, that might give you a unique cultural perspective. If you're interested in **international work, diplomacy, languages, or climate change** (especially relevant to island nations), paths like **STX with social sciences** or **HHX with international focus** could be excellent.

Suggested Next Step

- Visit an “uddannelsesvejleder” (educational counselor) at your school or kommune – they can help you choose the best fit.
 - Consider doing **brobygning** (introductory courses) to try out different paths before committing.
-

If you tell me more about:

- Subjects you like or are good at
- Whether you want to go to university
- If you're more academic or practical

...I can give you a more specific recommendation.
