

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Mexico. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

That's great — you're in an exciting position with a lot of opportunities ahead! Since you're 16, just finished *folkeskolen* in Denmark, and are fluent in Danish, you have a few main educational paths to choose from depending on your interests, goals, and learning style. Here's an overview of your options, with guidance to help you decide:

1. Gymnasiale Uddannelser (Upper Secondary Education – Academic Path)

This is the academic route, preparing you for university. There are four types:

STX (Studentereksamen)

- General upper secondary education.
- Focus on humanities, sciences, and social sciences.
- Good if you're not sure yet and want a broad foundation.

HHX (Higher Commercial Examination)

- Focus on business, economics, and languages.
- Great if you're interested in international business or marketing.
- Could connect well with your Mexican roots if you're multilingual.

HTX (Higher Technical Examination)

- Focus on technology, natural sciences, and innovation.
- Ideal if you like STEM subjects (science, tech, engineering, math).

HF (Higher Preparatory Examination)

- Shorter (2 years), more practical, often for those who need flexibility.
- Can be used as a stepping stone to university colleges.

 Choose one of these if:

- You think you might want to go to university.
- You like studying theory and working towards a longer-term academic goal.
- You enjoy subjects like science, economics, literature, or languages.

2. Erhvervsuddannelser (Vocational Education and Training – Practical Path)

Also known as EUD. You get hands-on training and often earn money as an apprentice.

Examples of fields:

- Electrician, carpenter, mechanic
- Health care, child care, social work
- Hospitality, gastronomy, tourism

 Choose this if:

- You prefer learning by doing, rather than sitting in a classroom all day.
- You want to get a job quickly and possibly start your own business someday.
- You're interested in practical skills and trades.

3. Combined or Alternative Programs

There are also programs like:

- **EUX:** Combines vocational training with academic subjects. You can get both practical skills *and* the qualifications to go to university.
- **International Baccalaureate (IB):** If you're interested in studying abroad or in English. More challenging but opens international doors.
- **10th Grade:** If you're unsure and want more time to decide. It can help you grow academically and personally before choosing a path.

Consider Your Goals & Interests

Ask yourself:

- Do I like working with my hands or studying theory?
- Do I want to go to university, or start working sooner?
- Am I interested in starting a business or working in a trade?
- Do I want to study something international, maybe even in English or Spanish?

A Suggestion Based on Your Background

Given that you:

- Are bilingual (Danish + Spanish)

- Grew up in Denmark with Mexican roots
- Are young and still exploring your interests

Here are 2 personalized suggestions:

👉 Option A: STX or HHX

- Gives you flexibility, strong academic grounding, and potential to pursue international studies or a business career.
- Especially HHX could be great if you want to combine languages (like Spanish), culture, and business.

👉 Option B: EUX

- If you like practical work but don't want to close doors to university later, this is a great combo.
- For example, becoming a skilled chef, IT technician, or health care worker *with* academic qualifications.

Would you like me to help you explore specific schools near you or match your interests to a specific program (like IT, design, health care, etc.)? I can also explain more about what daily life is like in any of these options.
