

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Micronesia (Federated States of). I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.
What educational path would you recommend for me?

Thanks for sharing your background — that's an exciting stage in your life, and it's great that you're thinking carefully about your future.

Since you've just finished **primary school** in Denmark and you're **16**, you're likely looking at options in the Danish **youth education system** — particularly "**ungdomsuddannelser**", which includes **general upper secondary education** and **vocational education and training (EUD)**.

First, think about your interests:

Ask yourself a few questions:

- Do you enjoy academic subjects like languages, math, science, or social studies?
- Are you more practical or hands-on — do you enjoy building, creating, or helping others?
- Do you like the idea of university in the future, or do you want to get a job sooner and learn through work?

1. Gymnasiale uddannelser (General Upper Secondary Education)

If you're academically inclined or open to going to university later, this is often the best route.

There are four main types:

Type	Description	Good for...
STX	General upper secondary school	Broad academic education (languages, science, humanities)
HHX	Higher commercial exam	Business, economics, marketing
HTX	Higher technical exam	Science, tech, IT, engineering
HF	Higher preparatory exam (2 years)	More flexible, for older students or those who want a quicker path

✅ **Recommended if:** You're unsure of your exact path but want to keep university options open. STX is the most common and broad, while HHX or HTX can be great if you're interested in business or tech.

2. Erhvervsuddannelse (Vocational Education and Training – EUD)

This is more practical and job-oriented. You alternate between school and paid work (apprenticeship).

Tracks include:

- Healthcare
- Construction

- IT & technology
- Hospitality
- Mechanics
- Design and media

✓ **Recommended if:** You want to enter the job market earlier or enjoy hands-on learning and working with professionals.

Bonus: Some vocational programs can lead to higher education later too, especially if you take **EUX**, which combines vocational training with academic courses.

3. What about your heritage?

Your Micronesian background is valuable. Denmark is becoming more global, and multicultural perspectives are important in areas like:

- International relations
- Language and translation
- Cultural exchange or NGO work
- Health and social care in diverse communities

If you're passionate about that side of your identity, you might consider paths that involve:

- Languages
- Social sciences
- International studies
- Healthcare

My recommendation (based on your age, background, and language skills):

If you're generally interested in school and open to university later:

➡ **STX** or **HHX**

If you like more hands-on learning or want to work sooner:

➡ **EUX** (so you can both work and possibly go to university later)

If you're unsure and want flexibility:

➡ **HF** (especially if you want to start slowly and still keep options open)

Tips:

- Visit **uddannelsesguiden.dk** (UG.dk) – the official Danish education guide.
- Talk to your school's **educational advisor (studievejleder)**.

- Try **brobygning** (intro visits) to different schools or programs — these are very helpful!

Would you like help narrowing things down based on your specific interests or strengths? I'd be glad to help you figure that out.
