

Uddannelsesmuligheder efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Palau. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

That's a great question, and it's really smart of you to start thinking about your next steps early. Since you've just finished primary school in Denmark (which typically ends around 9th or 10th grade), you have a few main educational paths ahead of you. Here's a breakdown of the most common options and some advice based on your situation:

Your Main Options After Primary School in Denmark

1. Gymnasium (STX, HTX, HHX) – Academic Upper Secondary Education

This is typically a 3-year program and leads to the **studentereksamen** (equivalent to high school diploma), which qualifies you for university or higher education.

- **STX:** General academic focus (humanities, sciences, social studies)
- **HTX:** Focus on technology and natural sciences
- **HHX:** Focus on business, economics, and international trade

Recommendation if you:

- Enjoy academic subjects like languages, science, math, or business
- Might want to go to university later
- Want flexibility in your career path

2. EUD – Vocational Education and Training

This combines school learning with apprenticeships and leads to skilled trades like electrician, hairdresser, mechanic, chef, etc.

Recommendation if you:

- Prefer practical, hands-on work
- Want to start working and earning earlier
- Are interested in trades or technical jobs

3. EUX – Vocational + Academic Combo

This is a mix of EUD and Gymnasium – you get a vocational education **plus** a qualification that also allows you to apply to university.

Recommendation if you:

- Want the flexibility to work a skilled trade **and** have the option for university later
- Like both practical and academic work

Personal Factors to Consider

Since you're:

- **Fluent in Danish**
- **Born and raised in Denmark**
- **Of Palauan heritage** (which is culturally unique – could be an asset in international fields)
- **Just finishing primary school** (likely around 9th or 10th grade)

Here are some paths you might consider based on interests:

If you're interested in...	Then consider...
Science, medicine, or research	STX with science track
Technology, engineering	HTX
Business, marketing, finance	HHX or EUX with business focus
Practical, hands-on professions	EUD or EUX
Working internationally	HHX or STX with focus on languages
Being your own boss	HHX or EUX with entrepreneurial track

My Personal Recommendation

If you're **not sure yet what you want to do** – which is totally normal – I recommend you **choose a gymnasium path** (like STX, HTX, or HHX) because it **keeps the most doors open** for the future.

If you're **more practically minded**, EUX is a strong middle ground: it gives you **skills for a job** but also allows you to **go to university later**.

Next Steps

1. **Talk to a guidance counselor** at your school or the **UU vejledning** (Ungdommens Uddannelsesvejledning).
2. **Visit open houses** at nearby gymnasiums or vocational schools.
3. **Think about your interests and strengths** – subjects you like or things you enjoy doing.
4. **Ask people in your community or family** about their jobs and how they got there – it can be very inspiring.

Would you like help exploring careers based on your interests or a quiz to help guide your choice?
