

Uddannelsesvejledning for 16-årig

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Peru. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

Thanks for sharing your background — that's a great starting point! Since you've just finished primary school in Denmark (which usually ends after 9th grade), your next step typically depends on your interests, learning style, and career goals. Here's a breakdown of the main educational paths you can take in Denmark, along with advice tailored to your situation:

1. Gymnasiale Uddannelser (Upper Secondary Education)

These are the most common next steps if you want to pursue higher education (like university) later.

a) STX (Studentereksamen)

- **Focus:** Broad academic subjects (science, social science, humanities).
- **Good for:** University preparation in almost any field.
- **Why choose it:** If you like a mix of subjects and want to keep your options open.

b) HHX (Højere Handelseksamen)

- **Focus:** Business, economics, marketing.
- **Good for:** Careers or further study in business and economics.
- **Why choose it:** If you're interested in international business, especially with your bilingual and multicultural background.

c) HTX (Højere Teknisk Eksamen)

- **Focus:** Technology, science, engineering.
- **Good for:** Future studies or careers in tech and science.
- **Why choose it:** If you like hands-on learning and are into STEM subjects.

d) HF (Højere Forberedelseksamen)

- **Focus:** A shorter, more flexible general education (2 years).
- **Good for:** Students who want a quicker path to higher education or are unsure what to study.
- **Why choose it:** If you want a fresh start or didn't thrive in a traditional school setting.

2. Erhvervsuddannelser (Vocational Education - EUD)

- **Focus:** Learning a trade or practical skill (e.g., electrician, hairdresser, chef, IT support).
- **Includes:** Apprenticeships and real work experience.
- **Good for:** People who like hands-on learning and want to start working sooner.
- **Why choose it:** You can still continue to higher education later (via EUX or other paths).

 **EUX** combines vocational training + general subjects at a high school level, so you can both get a trade and be eligible for university.

What to Think About When Choosing:

1. What subjects do you enjoy most?

Do you like science, social studies, working with people, or being creative?

2. Do you prefer theory or practical work?

If you like real-world, hands-on learning, EUD/EUX might be better than gymnasium.

3. Do you want to go to university later?

Then a gymnasium education (especially STX, HHX, or HTX) is usually the best fit.

4. Your cultural background

Being bilingual and bicultural is a huge strength! You could think about paths involving languages, international business, social work, or global studies.

Personal Suggestion

Since you're fluent in Danish and come from a Peruvian background, you might have strong skills in communication, languages, or cross-cultural understanding. Here's a tailored recommendation:

-  **Try STX** if you enjoy general academics and want to keep doors open.
-  **Try HHX** if you're curious about business, economics, or international work.
-  **Try EUX** if you want both practical skills and academic qualifications.

Next Step

You can also visit www.ug.dk (UddannelsesGuiden) — Denmark's official education guide. It has a great tool to compare educations and find your interests.

If you'd like, I can also help you make a plan or explore specific careers you're interested in. Want to share what subjects or hobbies you enjoy most?
