

Uddannelsesmuligheder efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Republic of Korea. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

Thanks for sharing a bit about yourself — that's a great place to start. Since you're 16, have finished primary/lower secondary school (likely "Folkeskole" in Denmark), and are fluent in Danish, you're now at an important point where your choices can shape your future opportunities. Here's a breakdown of your options and what might suit you depending on your interests, goals, and strengths.

Main Educational Paths After Primary School in Denmark

1. Gymnasiale Uddannelser (Upper Secondary Education) – Academic Track

These are for students who are more academically inclined or planning to go to university.

- **STX (Studentereksamen)** – General academic program. Strong focus on languages, social sciences, and natural sciences. Good if you're not sure yet and want flexibility.
- **HHX (Højere Handelseksamen)** – Focuses on business, economics, and marketing. Great if you're interested in working in business, trade, or international relations.
- **HTX (Højere Teknisk Eksamen)** – Focus on technology and natural sciences. A good choice if you like STEM subjects.
- **HF (Højere Forberedelseksamen)** – A 2-year program, often more practical, for students who prefer a shorter academic path and still want access to higher education.

Recommended if:

You want to keep your academic options open, possibly go to university, or you're interested in subjects like science, business, or languages.

2. Erhvervsuddannelser (Vocational Education and Training - VET)

This path combines school education and apprenticeship (praktik) in a company.

- Covers trades like carpentry, electrician, IT-supporter, health care assistant, chef, and more.
- You can also choose an **EUX** program, which gives you both a vocational education **and** a general upper secondary qualification (like STX) – the best of both worlds.

Recommended if:

You want to get into the workforce sooner, prefer hands-on work, or know you want to go into a specific trade or practical profession.

3. International Options

Since your parents are from South Korea and you may have cross-cultural or multilingual skills, you could consider:

- **International Baccalaureate (IB)** – Taught in English, accepted worldwide. Very demanding academically but good if you might want to study abroad or in English-speaking universities.
- **Studying Abroad or Exchange Programs** – A possibility later on, especially if you want to explore opportunities in Korea or elsewhere.

✓ Recommended if:

You're internationally minded, interested in studying or working abroad, or want to strengthen your English.

🧠 Some Key Questions to Ask Yourself:

- Do I enjoy academic subjects like math, languages, or science?
- Do I prefer practical, hands-on work?
- Do I want to study at university later?
- Am I interested in working in Denmark, Korea, or internationally?

🔍 Example Paths Based on Interests:

Interest	Recommended Path
Science & Technology	HTX or IB
Business & Economics	HHX or STX with social science focus
Hands-on Trades	Vocational (EUD) or EUX
Quick entry to work	EUD or HF
International future	IB or HHX (with international electives)

🎯 Final Advice

- **If you're unsure**, STX or HHX gives you broad flexibility.
- **If you know what you want**, go for the vocational or specialized track.
- **If you want international options**, consider IB or EUX.

Would you like help comparing two specific paths (e.g., STX vs HHX)? Or are you leaning toward something like science, business, art, or something else? I can help narrow it down more if you give a bit more info.
