

Uddannelsesvalg efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Republic of Moldova. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

That's a great question — and it's excellent that you're thinking ahead. Since you just finished **primary school** in Denmark (which usually ends after **9th or 10th grade**, depending on your path), you're now at a major decision point in the Danish education system. Let's walk through your options, then I'll give you a recommendation based on your situation.

🎓 Main Educational Paths After Primary School in Denmark:

1. Gymnasiale uddannelser (Upper Secondary Education – Academic Path)

Designed for students who want to go to **university later**.

- **STX (Alment Gymnasium):** Broad general education. Best if you're still exploring your interests or want to go to university.
- **HHX (Handelsskolens Gymnasium):** Focus on business, economics, and languages. Great if you're into business or international work.
- **HTX (Teknisk Gymnasium):** Focus on technology, science, and innovation. Best if you're into STEM (science, tech, engineering, math).
- **HF (Højere Forberedelseksamen):** A 2-year, more flexible option if you prefer a shorter program or need a more hands-on or mature environment.

2. Erhvervsuddannelser (VET – Vocational Education and Training)

Learn a profession (crafts, tech, healthcare, etc.) and get job-ready. You can **start working directly** or combine it later with more education.

- Examples: Electrician, carpenter, hairdresser, social and health care worker (SOSU), IT-supporter.
- Includes both **school and apprenticeship** (praktik).

3. Kombinerede forløb / EUX

A combination of **vocational training and academic studies**. You get both a professional qualification **and** a qualification to continue studying at university.

🇩🇰 Based on your background:

You're fluent in Danish, born and raised in Denmark, and you're from a Moldovan family — which likely gives you strong **intercultural competence** and **multilingual potential**. These are great assets.

So, here's what I recommend based on different interests:

✓ **If you're not sure yet:**

STX is the safest and broadest path. It gives you time to figure out what you want to do, and keeps all doors open for university and beyond.

✓ **If you're into business or languages:**

HHX would be a great fit — especially if you can combine your Danish and Moldovan background with interest in international trade, economics, marketing, or languages.

✓ **If you like science, tech, or engineering:**

HTX is an excellent choice. You'll learn about innovation, design, chemistry, physics, and IT — a great springboard to engineering or tech careers.

✓ **If you want to start working sooner, or like practical learning:**

EUD (vocational) or **EUX** (combined) might be perfect. These paths let you work with your hands, earn money, and still allow for further study.

Personal suggestion:

If you're a curious and motivated student who wants to keep your options open — **STX or HHX** is likely the best starting point. Later, you can study at university or pivot to something more practical if you change your mind.

But if you know you like **hands-on learning**, you might love **EUX** — especially in something like IT, healthcare, or business.

Would you like me to help you explore specific career fields or schools in your region of Denmark?
