

Uddannelsesmuligheder efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Rwanda. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in Danish. What educational path would you recommend for me?

That's a great question — and it's fantastic that you're thinking seriously about your next steps. In Denmark, there are several solid options after primary school (folkeskole), and the best path depends on your interests, goals, and how you prefer to learn. Here's a breakdown of your options and what might suit you:

🎓 1. Gymnasium (STX, HHX, HTX, HF)

If you're academically inclined or might want to go to university later, gymnasium is the most common next step.

STX – General upper secondary school:

- Focus on humanities, science, and social studies.
- Good if you're not sure what you want yet.

HHX – Business-focused:

- Economics, marketing, international trade.
- Great if you're interested in business or entrepreneurship.

HTX – Technical/science-focused:

- Math, technology, biology, IT.
- Good if you like science, engineering, or want to work with tech.

HF – 2-year program (shorter):

- More practical, easier access if you struggled a bit in folkeskole.
- Good if you're mature and want to get to higher education faster.

Why this path might be good for you:

- You're fluent in Danish and have a multicultural background, which is a strength in many academic and international fields.
- Gymnasium opens a lot of doors for further education.

2. EUD – Vocational Education and Training (Erhvervsuddannelse)

If you prefer hands-on learning or want to work directly after school:

- Learn a trade (e.g. electrician, carpenter, chef, healthcare assistant).
- Combines school + practical training with companies.
- You still have the option to do more education later if you want.

Why this might be good for you:

- You can earn money early.
- You get real-life work experience.
- If you're practical and learn better by doing, this is a strong path.

3. EUX – Mix of Vocational + Gymnasium

- Best of both worlds: You learn a trade *and* get a gymnasium-level education.
- Harder workload, but more flexible options later.

Why this might be good:

- You keep your future open — work or university.
- Especially smart if you want both practical skills and an academic future.

What to ask yourself:

- **Do you enjoy reading, writing, learning theory?** → Gymnasium (STX, HHX, HTX).
- **Do you like working with your hands or solving practical problems?** → EUD or EUX.
- **Are you unsure, but want to keep options open?** → STX or EUX.

Suggested Next Steps:

1. **Visit educational fairs or open house events** (åbent hus).
2. **Talk to a counselor** at your school or at a local *UU vejledning*.
3. **Try a bridge course** (brobygning) — these short trial periods can help you see what suits you.

If you tell me a bit more about what subjects you like (e.g., science, business, arts), hobbies, or what you imagine doing in the future, I can give you a more personalized suggestion.
