

Uddannelsesvejledning efter folkeskole

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from San Marino. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

Thanks for sharing a bit about yourself! Since you're 16, living in Denmark, and just finished primary school, you're at a natural point to choose your upper secondary education path. In Denmark, there are several options depending on your interests, strengths, and future plans. Here's a breakdown of the most common routes and some tailored recommendations:

Main Educational Paths After Primary School (Folkeskole)

1. Gymnasiale uddannelser (General Upper Secondary Education)

These are typically 3-year programs that prepare you for university.

- **STX (Studentereksamen):**
Broad academic focus (sciences, humanities, social sciences). Good if you're interested in university later and want to keep options open.
- **HHX (Higher Commercial Examination Programme):**
Focus on business, economics, and international trade. A strong choice if you're interested in entrepreneurship or economics.
- **HTX (Higher Technical Examination Programme):**
Focus on technology, science, and IT. Ideal if you like science, engineering, or innovation.
- **HF (Higher Preparatory Examination):**
A 2-year general education program (after 10th grade), often taken by slightly older students or those who prefer a shorter route to higher education.

2. Erhvervsuddannelser (Vocational Education and Training - VET)

- Combine school and paid apprenticeships.
- Great if you want to start working earlier or prefer hands-on learning.
- Fields include: electrician, chef, mechanic, healthcare worker, carpenter, etc.
- Can still lead to higher education (like via **EUX**, which combines VET with general upper secondary education).

Personal Recommendation (Based on What You Shared)

Since you're fluent in Danish and have a multicultural background (San Marino roots!), here's how you might decide:

If you're unsure and want to keep doors open:

👉 **STX** is a solid, flexible path. You'll get a strong academic foundation and can choose your specialisation (e.g., language, science, or social science lines).

If you're interested in business or international matters:

👉 **HHX** could be great, especially given your background—it offers language, trade, and economics, which can tie into international studies or careers.

If you love science, tech, or engineering:

👉 **HTX** is very practical and focused on future technologies.

If you prefer hands-on work or want to earn early:

👉 **EUD** or **EUX** (especially **EUX**, if you want both practical training and the option to study further).

Danish Education System Tip

You can also take a **10th grade** (optional), especially if you want a bit more time to explore your options or improve your grades.

Final Tips

- Visit **uddannelsesguiden.dk (UG.dk)** – it has a quiz and descriptions of every program.
- Attend open house events (åbent hus) at local schools to feel the environment.
- Talk to a **UU-vejleder (youth guidance counselor)** – they're free and really helpful.
- Consider what you enjoy doing—not just what you're good at.

Would you like me to help you compare specific schools or make a plan based on a particular interest (e.g., law, business, design, etc.)?
