

Uddannelsesvejledning i Danmark

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from San Marino. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

Thanks for sharing that! It's great that you're thinking ahead — choosing the right educational path is an important step. Since you've just finished primary school in Denmark and you're 16, you're at the point where you'll be choosing between several secondary education options. I'll give you a quick overview of your main choices and some guidance based on your background and goals.

🎓 Main Secondary Education Options in Denmark

1. Gymnasium (STX)

- General upper secondary education
- Broad academic focus: sciences, humanities, social sciences
- Prepares you for university
- Ideal if you're unsure what to study later or want to keep your options open

2. HHX (Higher Commercial Examination Programme)

- Focuses on business, economics, and international trade
- Includes languages, marketing, and business economics
- Good if you're interested in entrepreneurship, international business, or working in companies

3. HTX (Higher Technical Examination Programme)

- Technical and scientific focus: technology, IT, engineering, etc.
- Ideal if you like hands-on projects and want to work in science/tech/engineering fields

4. HF (Higher Preparatory Examination Programme)

- Shorter, 2-year program (usually for students who want a faster route or didn't complete 9th/10th grade in the traditional way)
- Also leads to higher education but usually shorter programs (professionshøjskoler, etc.)

5. EUD / EUX (Vocational Education and Training)

- EUD: Direct route to a job (e.g., electrician, chef, carpenter, etc.)
- EUX: Combines vocational training with academic studies, so you can also go to university
- Great if you want practical skills *and* academic options

🧠 What to Consider (Personal Fit)

- **Do you enjoy academic work like writing essays and analyzing texts?**
→ STX or HF might suit you.
- **Do you like economics, marketing, or want to start your own business one day?**
→ HHX would be a strong fit.
- **Are you into tech, science, or engineering – and like practical applications?**
→ HTX or EUX technical programs would be a good match.
- **Prefer hands-on learning and want to enter the workforce faster?**
→ EUD (vocational) might be right.
- **Want a mix of theory and practice, and to keep university open as an option?**
→ EUX is perfect for that.

Considering Your Background

- Being fluent in Danish is a big plus — it means you're ready for any of these paths.
- If you also speak Italian or are connected to your Sammarinese heritage, you could use that in a business or international context (HHX is strong here).
- If you're not yet sure what you want to do later, STX gives you the broadest foundation.

My Recommendation (Based on What You've Shared)

If you're unsure what to do long-term and want to keep your options open, **STX (Gymnasium)** is the safest and most flexible path. It gives you access to *all* higher education options and lets you figure things out as you go.

But if you already know you like something specific (like business, tech, or working with your hands), it might be worth going for HHX, HTX, or EUX.

If you tell me a bit more about:

- What subjects you enjoy
 - Whether you like school and academics
 - If you have a dream job or interest
- ... I can give you a much more tailored recommendation!

Would you like to explore that?
