

# Uddannelsesmuligheder efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Sweden. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

That's a great place to be—having finished primary school and standing at the beginning of the next big step in your education. In Denmark, after **primary school (folkeskolen)**, you typically have a few main paths to choose from depending on your interests, learning style, and career goals.

Here's a breakdown of your **main options**, with advice to help you decide:

## ♦ 1. Gymnasiale uddannelser (Upper Secondary Education – General Academic)

If you're aiming for **university or higher education**, this is a good path.

### Main types:

- **STX (Almen studentereksamen)** – General and academic focus. Good if you like subjects like languages, science, history, etc.
- **HHX (Højere handelseksamen)** – Focus on **business, economics, and international trade**.
- **HTX (Højere teknisk eksamen)** – Focus on **science and technology**.
- **HF (Højere forberedelseseksamen)** – Shorter 2-year program, often for more mature students or those who need a quicker route to higher education.

### Recommended if:

- You enjoy academic work (reading, writing, studying).
- You think you might want to go to university (even if you're unsure what to study yet).
- You're good at self-discipline and learning from books, lectures, and discussions.

## ♦ 2. Erhvervsuddannelser (VET – Vocational Education and Training)

If you want to **learn a trade or get into the workforce** faster.

You start with **Grundforløb 1 og 2**, then go on to apprenticeships and practical training in areas like:

- Carpentry, plumbing, mechanics
- IT, business, health care, child care, culinary, etc.

### Recommended if:

- You prefer **hands-on learning**.
- You're more interested in working with your hands, solving practical problems, or starting work earlier.
- You want a **direct path to a job**, possibly with the option to continue studies later.

### ♦ 3. Kombinerede muligheder (Combination Programs)

There are also schools and programs that mix **academic and vocational** elements, or international options like the **IB (International Baccalaureate)**.

## Considering You're Bilingual (Danish/Swedish):

That's a big strength! You might also consider:

- **Studying IB** (International Baccalaureate) – international schools in Denmark offer this, and it could prepare you for studies across Europe.
- **Nordic studies or language-heavy lines** in STX/HHX.
- **Studying in Sweden later** – Your Swedish background might make it easier to live or study there later if you want.

## My Suggestion (based on what you've shared):

Since you've just finished primary school in Denmark and are fluent in Danish (and likely also familiar with Swedish), **STX or HHX** could be a great start if you're not yet sure about your future career and want to keep your options open.

If you're:

- More interested in **technology** and science: **HTX**
- More business/entrepreneurship minded: **HHX**
- More interested in broad academic learning and flexibility: **STX**

If you prefer **practical learning** and are excited to learn a skill or start earning sooner, **an EUD program (vocational)** might be a better match.

## Final Tips:

- **Talk to your school counselor** – They can help guide you based on your grades and interests.
- **Visit open houses** at local **gymnasier** or **erhvervsskoler**.
- **Try a "brobygning"** (bridge course) to experience different programs before you decide.

Would you like help narrowing it down based on your **favorite subjects** or **what kind of work/life you imagine in the future**?
