

Uddannelsesmuligheder i Danmark

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Switzerland. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

That's great that you're considering your options carefully! Since you're 16 and have just completed primary school in Denmark (which usually ends around 9th or 10th grade), your next step is to choose a **youth education program**. In Denmark, you have several solid options, depending on your interests, strengths, and long-term goals.

Here's a breakdown of your main options, with some recommendations:

♦ 1. Gymnasiale uddannelser (General Upper Secondary Education)

These are academic high schools that prepare you for university:

- **STX (Studentereksamen)** – General upper secondary education, good if you're interested in humanities, science, or social studies.
- **HHX (Higher Commercial Examination Programme)** – Focus on business, economics, and international relations.
- **HTX (Higher Technical Examination Programme)** – Emphasis on natural sciences, technology, and innovation.
- **HF (Higher Preparatory Examination)** – Shorter (2 years), more flexible, often used as a route back to education.

Recommended if:

You like academic subjects, might want to go to university in the future, or are unsure but want to keep your options open.

♦ 2. Erhvervsuddannelser (Vocational Education and Training - EUD)

This combines school and apprenticeships, and prepares you for a specific job.

- Examples: electrician, carpenter, chef, IT support, healthcare worker.
- Usually takes 3–5 years.
- You get paid during your apprenticeship (praktik).

Recommended if:

You like practical work, want to enter the workforce sooner, or are interested in a specific trade or craft.

♦ 3. Kombineret forløb (EUX)

This combines **vocational training (EUD)** with a **general upper secondary exam**, meaning you can both **work in a trade** and **go to university** later.

Recommended if:

You want both academic and practical skills and want to keep your options open for both work and higher education.

♦ **4. International options / move to Switzerland**

Since you have Swiss heritage, it's possible you could study in Switzerland. However, the education systems are very different. If you're fluent in German, French, or Italian, it might be an option later, but I'd suggest finishing your upper secondary education in Denmark first, then consider studying in Switzerland for university.

 Questions to help guide you:

- Do you enjoy academic learning, or do you prefer hands-on/practical tasks?
- Do you have any specific career interests already (like business, design, IT, engineering, healthcare)?
- Are you thinking about going to university later?
- Do you like working with people, technology, ideas, or your hands?

If you can tell me a bit more about your interests or dreams, I can give a more personalized recommendation.

But based on your background, **STX** or **EUX** would be excellent options to keep many doors open — especially since you're fluent in Danish and likely strong academically.
