

Uddannelsesmuligheder efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Togo. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

Thanks for sharing that — you're in an exciting place in life with a lot of possibilities ahead. Since you've just finished primary school in Denmark (which typically ends after 9th or 10th grade, depending on your choice), here are your main educational options in the Danish system, along with some thoughts tailored to your background and future:

♦ First, What Are Your Main Options After Primary School in Denmark?

1. Gymnasiale uddannelser (Upper Secondary Education – academic route)

Designed for students who may want to go to university later. Main types:

- **STX** (Almen studentereksamen): Broad, academic, includes humanities, science, and social studies.
- **HHX** (Handelsskole): Focus on business, economics, and marketing.
- **HTX** (Teknisk gymnasium): Focus on science, technology, and innovation.
- **HF** (2-year general education): More flexible, can also lead to university, often used if you're a bit older or want a different pace.

2. Erhvervsuddannelser (Vocational Education and Training – VET)

Focus on hands-on training and work experience. You can become anything from a carpenter, electrician, hairdresser, chef, to IT support or healthcare assistant. Some of these also let you continue studying later on (via **EUX**, which combines VET with general upper secondary education).

3. 10. klasse (Optional extra year)

A good option if you're unsure what to do next or want to boost your grades or mature a bit before starting STX, VET, etc.

♦ Which Path Might Suit You?

Here are a few ways to think about your decision:

✅ If you're academically strong and might want to go to university:

- **STX** is a great all-round choice.
- **HHX** is good if you're interested in business, trade, or entrepreneurship.
- **HTX** is ideal if you're into science, technology, or engineering.
- All of these keep your university doors open.

✓ **If you prefer hands-on learning or want to work sooner:**

- **Erhvervsuddannelse (VET)** is a strong option. Denmark has one of the best VET systems in the world — and jobs are often well-paid and in demand.
- **EUX** is a great hybrid if you want practical training *and* the option for further education.

✓ **If you feel unsure or want more time:**

- **10. klasse** can give you a break to mature, improve your skills, or explore interests with less pressure.

◆ **Some Personal Considerations for You**

- **Fluency in Danish** is a huge plus — it opens all doors.
- With your **Togolese background**, you might bring a unique perspective to fields like international business, healthcare, teaching, or social work.
- If you're **interested in helping others**, social or healthcare VET paths are always needed.
- If you're good at **tech, problem-solving, or design**, HTX or an IT-related VET education could be a perfect match.

💡 **Final Advice**

Ask yourself:

- Do I enjoy school subjects and want to study more? → Go for STX/HHX/HTX.
- Do I want to work with my hands, get a job faster, and maybe study later? → Look into VET/EUX.
- Am I unsure and need time to grow or explore? → Consider 10th grade at an **efterskole** or **folkeskole**.

You can also take a **guidance meeting** with an **UU-vejleder (youth education counselor)** — they're there to help you figure it out.

If you tell me more about what you're interested in — e.g., subjects you like, jobs you think are cool — I can give you more personalized suggestions.
