

Uddannelsesmuligheder efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from United States. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

Thanks for sharing your background—you're in a great position with both Danish and American roots, and being fluent in Danish opens a lot of doors locally. Since you've just finished **primary school** in Denmark (which usually means up to 9th or 10th grade), your next step will likely be one of the upper secondary education paths. Here's a breakdown of your options and how to think about them, depending on your interests and goals:

1. Gymnasium (STX, HHX, HTX, HF) – Academic Upper Secondary Education

These are 2–3-year programs that prepare you for **university**. Choose this path if you're aiming for further studies after secondary school.

STX (Alment Gymnasium)

- Focus: Broad academic subjects like Danish, English, history, science, social studies.
- Good if you're not yet sure what you want to study later—keeps all doors open.
- Recommended if you're thinking of university in Denmark or abroad.

HHX (Business Gymnasium)

- Focus: Business, economics, marketing, foreign languages.
- Great if you're interested in business, entrepreneurship, or international trade.

HTX (Technical Gymnasium)

- Focus: Science, technology, and engineering.
- Ideal for someone interested in programming, IT, biology, or similar fields.

HF (2-Year Program)

- More practical and flexible.
- Good for people who want a quicker route to a specific higher education program.
- Less academically intense than STX but still leads to further education.

2. EUD/EGU – Vocational Education and Training

If you prefer **hands-on work** and want to get into the workforce earlier, consider vocational training.

- You choose a trade (e.g., carpenter, mechanic, health care assistant, chef).
- Combines school with apprenticeships.
- Leads to stable careers and can also be a springboard into further education (e.g., via **EUX**, which combines vocational + academic studies).

3. International Options

Since your parents are American and you're fluent in English, international schools or exchange programs might be interesting:

- **International Baccalaureate (IB):** Taught in English, recognized globally. Prepares you for university anywhere in the world.
- **Exchange Year in the US:** As an American citizen, this could be easier for you. Could be a great cultural and academic experience.
- You could even consider **moving to the U.S. for high school** or university if that's an option your family is open to.

How to Choose?

Ask yourself:

- Do I enjoy academic subjects and want to go to university? → **STX or IB**
- Do I like business and might want to work in that field? → **HHX**
- Am I more into science, engineering, or IT? → **HTX**
- Do I want to start working and earning sooner? → **EUD or EUX**
- Would I enjoy an international setting and possibly study abroad? → **IB or Exchange**

My Advice for You:

Since you're bilingual and have a cross-cultural background, you might want to **keep your options open for both Denmark and the U.S.** in the future. With that in mind:

Best all-round option: Consider **STX** or **International Baccalaureate (IB)** if you're open to university and want flexibility.

Alternative option: If you're drawn to tech or engineering, **HTX** is very valuable in today's job market.

If you're unsure or want guidance: Talk to a **UU-vejleder** (educational advisor) in your municipality—they can help you figure out the best path based on your interests.

If you tell me more about your interests (like: do you like science, social studies, art, tech, etc.), I can give you a more personalized suggestion.
