

# Uddannelsesmuligheder i Danmark

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Uzbekistan. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

Thanks for sharing a bit about yourself! You're in a great position to make thoughtful decisions about your future, and it's excellent that you're considering your options early. Since you've just finished **primary school in Denmark** (folkeskolen), the typical next steps in the Danish education system are **youth education programs** (ungdomsuddannelser). Here's a breakdown of your main options, and how you might choose among them based on your interests and goals:

## 1. Gymnasiale uddannelser (Upper Secondary General Education)

These are 2-3 year programs that prepare you for higher education (university or professional studies).

### Main options:

- **STX** (Almen studentereksamen): Broad academic focus (humanities, natural sciences, social sciences).
- **HHX** (Higher Commercial Examination): Focus on business, economics, and marketing.
- **HTX** (Higher Technical Examination): Focus on science, technology, and IT.
- **HF** (Higher Preparatory Examination): 2-year option, more flexible, often for people who didn't finish 9th/10th grade with strong grades.

### Recommended if:

- You're interested in going to university later.
- You enjoy academic subjects and want to keep your options open.

## 2. Erhvervsuddannelser (Vocational Education and Training – EUD)

These combine school with paid internships (praktik) and prepare you directly for a career.

### Fields include:

- Healthcare
- Construction
- IT
- Mechanics

- Hospitality
- Childcare, etc.

#### Recommended if:

- You prefer practical learning.
- You want to start working in a skilled job soon after school.
- You're interested in hands-on fields.

### 3. EUX – Best of Both Worlds

A mix of vocational training and academic upper-secondary education. It takes longer (around 4 years) but gives both a vocational qualification **and** eligibility for higher education.

#### Recommended if:

- You want to learn a trade but also keep the door open to university later.
- You're hardworking and interested in both practical and academic paths.

### Other factors to consider

- **Language skills:** If you speak Uzbek or Russian too, that's a great advantage – especially in international business, politics, or interpretation.
- **Career dreams:** Think about what excites you: helping people? Technology? Creating things? Managing businesses?
- **Social support:** Talk to a student counselor (studievejleder), your parents, and others who know you well.
- **Bridge programs:** Consider a **10th grade** year if you're unsure – some schools offer programs where you can explore career areas.

### My advice (based on what you shared):

If you're **not yet sure** exactly what you want to do and enjoy learning in general, then a **STX or HHX** might be a strong choice to keep your options open.

- **STX:** if you like a broad education with subjects like literature, science, history, and languages.
- **HHX:** if you're curious about business, finance, or maybe want to start your own business someday.

If you're **more into practical, hands-on learning**, look into an **EUX** in a field that interests you — this gives you flexibility and solid job prospects.
