

Uddannelsesmuligheder efter folkeskole

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Zambia. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish. What educational path would you recommend for me?

Thanks for sharing that! Since you're 16 and have just finished primary school in Denmark (which likely includes 9th or 10th grade in the Danish *folkeskole* system), you're now in a great position to choose a path that fits your interests, strengths, and future goals.

Here are the main **educational options** available to you in Denmark after *folkeskole*, along with some thoughts to help you choose:

1. Gymnasiale Uddannelser (Upper Secondary Education)

These are more academically oriented and prepare you for university.

A) STX (*Almen studentereksamen*)

- Broad, academic program with subjects like languages, science, and humanities.
- Good if you're interested in university later, but not sure yet what to study.

B) HHX (*Højere handelseksamen*)

- Focuses on business, economics, and marketing.
- Good if you're interested in business, entrepreneurship, or international trade.

C) HTX (*Højere teknisk eksamen*)

- Focus on technology, IT, and science.
- Good for those interested in engineering, programming, or technical fields.

D) HF (*Højere forberedelseksamen*)

- A 2-year program (shorter than others) for those who might want to go to university or professional education but prefer a more mature and less traditional learning environment.
- Often used by people who want a quicker route.

2. Erhvervsuddannelser (Vocational Education and Training / EUD)

If you prefer hands-on, practical work and want to start a career earlier.

- You combine school with an apprenticeship.

- Training in areas like construction, healthcare, IT support, car mechanics, culinary arts, etc.
- Leads to a job or can be a path to *Erhvervsakademi* (Academy Profession programs) or higher education through *EUX*.

+ Consider **EUX**:

- Combines vocational training with academic subjects.
 - Gives you both a trade and the option to go to university later.
-

How to Decide?

Ask yourself:

- Do I prefer **theory or practical work**?
 - Am I thinking about going to **university**, or do I want to **start working sooner**?
 - What subjects **interest me the most** right now (science, business, languages, technology, health, etc.)?
-

My Recommendation (based on what you shared):

Since you're fluent in Danish, were raised in Denmark, and you have a multicultural background (which can be a great strength), here are two strong options depending on your interests:

If you like academics or want university later:

STX – to keep your options open and explore what you enjoy.

If you want practical experience *and* the option for higher education:

EUX – gives you a solid trade and study skills.

If you tell me a bit more about:

- Your favorite school subjects
- What you enjoy doing in your free time
- Whether you think about a certain type of job or future career

...I can give you a more personal recommendation.
