

Uddannelsesvalg efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Angola. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

Thank you for sharing a bit about yourself—that helps me give a thoughtful answer! Since you're 16, just finished primary school, and are fluent in Danish, you're at a key decision point in Denmark's education system. Let's break down your options and some ideas based on different interests:

📌 Main educational paths after primary school in Denmark

1 Gymnasiale uddannelser (Upper secondary education / high school)

These are generally 3-year academic programs that prepare you for higher education at university or other advanced study:

- **STX (Almen gymnasium)** – Broad, academic focus with humanities, social sciences, and sciences.
- **HHX (Handelsskole)** – Focus on business, economics, marketing, and international trade.
- **HTX (Teknisk gymnasium)** – Focus on technology, natural sciences, and innovation.
- **HF (Højere Forberedelseseksamen)** – 2-year program, often for those who want a faster route to higher education or need more flexible options.

👉 Good choice if:

You enjoy academic study and are considering university or professional higher education (e.g. to become a doctor, engineer, teacher, business manager).

2 Erhvervsuddannelse (Vocational education and training / VET)

Combines schooling with apprenticeship. You get hands-on training while also learning theory. Fields include:

- Skilled trades (e.g. electrician, carpenter, chef)
- Health and social care
- IT and technical fields
- Retail and service

👉 Good choice if:

You like practical, hands-on learning and want to enter the workforce with strong job skills—though you can also later take further education.

Kombineret forløb / EUX

A mix of vocational training and upper secondary education, so you get both a trade qualification and a high school diploma. It keeps doors open for university later.

 Good choice if:

You want both practical skills and the option for further academic study.

How to choose?

Ask yourself:

- What subjects do I enjoy most? (e.g. science, languages, arts, business, technology)
 - Do I prefer hands-on learning or classroom-based academic work?
 - Am I interested in going to university one day?
 - Do I want to start working sooner, or do I want to study for longer?
-

My recommendation for you

Since you're fluent in Danish, born and raised in Denmark, and have roots in Angola, you might consider:

 **STX or HHX** if you enjoy academic subjects and want to keep your future flexible (e.g. university, international studies, business).

 **EUX** if you're interested in combining practical training with the option to study further.

 **HTX** if you're passionate about science, technology, or engineering.

If you're unsure, visiting open house events (Åbent Hus) at different schools or speaking to a school counselor (UU-vejleder) can help a lot!

If you'd like, tell me:

- What subjects or activities you enjoy most at school?
- Do you have any dream jobs or areas you're curious about?

That way I can give you more specific guidance! 😊
