

Uddannelsesmuligheder efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Australia. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

That's a great question — and it's thoughtful of you to reflect on your next step so early! Since you've just finished primary school in Denmark (I assume *folkeskolen* at the end of 9th or 10th grade), you have several solid educational options ahead. Let's break them down, considering your background:

Typical Danish educational paths after primary school

After *folkeskolen*, you can choose between academic and vocational options depending on your interests:

✓ Gymnasiale uddannelser (Upper secondary academic programs)

If you're aiming for university later, or want to keep doors open:

- **STX (Studentereksamen)** – broad, general academic education with a mix of sciences, humanities, and arts.
- **HHX (Higher Commercial Examination)** – focus on business, economics, marketing, and languages.
- **HTX (Higher Technical Examination)** – focus on technology, natural sciences, and innovation.
- **HF (Higher Preparatory Examination)** – shorter (2 years), more practical, good for adults or those wanting flexibility.

✓ Erhvervsuddannelser (Vocational education & training)

If you want to move toward a skilled trade (e.g. carpenter, chef, electrician, IT technician) with hands-on learning and apprenticeships.

✓ Kombinationsuddannelser (e.g. eux)

Combine vocational training with upper secondary academic qualifications — great if you want both practical skills and the option for university.

Your unique situation

Since your parents are from Australia and you're fluent in Danish, here are some extra factors to think about:

- You could **consider international education** (e.g. International Baccalaureate, IB) if you want easier access to study abroad later, or to keep English strong in an academic setting.

- Your dual cultural background could open doors to study or work in both Denmark and Australia — so keeping English academic skills polished could be valuable.
-

What to consider

- Do you enjoy theoretical/academic work, or prefer practical, hands-on learning?
 - Are you considering going to university in Denmark or abroad (e.g. Australia)?
 - What subjects or career paths excite you? (e.g. science, business, arts, technology, trades)
-

My recommendation

Since you're fluent in Danish, born in Denmark, and have an Australian connection:

→ **If you want flexibility and university options:** STX, HTX, or an International Baccalaureate would be great.

→ **If you like practical work and want a faster route to a job:** Vocational training or EUX can be excellent — and you can still pursue further education later if you change your mind.

If you tell me a bit more about your interests (what subjects or careers you're drawn to), I can help you narrow down the best fit! Would you like help exploring that? 🚀
