

Uddannelsesmuligheder efter folkeskole

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Botswana. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

That's a great and exciting point in your life! Let's break it down thoughtfully so you can make a choice that fits your interests, strengths, and future ambitions.

The Danish educational path after primary school

In Denmark, after primary/lower secondary school (*folkeskole*), you typically choose between these main options:

Gymnasiale uddannelser (General upper secondary education)

These prepare you for higher education (like university). The main types are:

- **STX** (*studentereksamen*): Broad and academic, with a mix of humanities, science, and social sciences.
- **HHX** (*højere handelseksamen*): Focus on business, economics, and international trade.
- **HTX** (*højere teknisk eksamen*): Emphasis on technology, science, and innovation.
- **HF** (*højere forberedelseksamen*): Shorter, more practical academic path (2 years, often for more mature students or those who want quicker access to further study).

Erhvervsuddannelser (Vocational education and training, EUD)

If you want hands-on skills and to go directly into a profession (e.g. carpenter, electrician, chef, hairdresser). You can combine work and study (apprenticeships) and later add more education (e.g. *EUX* combines vocational with academic so you can still go to university).

How to choose? Think about...

Your interests

- Do you like academic study (reading, writing, theory) or practical work (hands-on, solving real-world problems)?
- What subjects excite you most — science, languages, business, art, technology?

Your career dreams

- Do you want to go to university later? Then STX, HHX, HTX, or HF might suit you.
- Are you eager to get a job and earn while you learn? Then EUD or EUX could be great.

Your learning style

- Do you thrive in classroom settings or do you prefer practical experience and learning by doing?
-

Other things to consider

✨ With your background (Danish + Botswanan heritage), you could have unique strengths in:

- Languages (maybe combine Danish with English, Setswana, or other languages)
- International business (HHX could be interesting)
- Technology and global development (HTX could connect you to future-focused fields)

✨ **Future flexibility:** Many paths still allow you to change direction later. For example, even with a vocational education, you can go to university via EUD or supplementary courses.

My recommendation

If you're unsure and want to keep your options open:

👉 **STX** — for a broad foundation

👉 **HTX** — if you like science, tech, and innovation

👉 **HHX** — if you're interested in business, economics, or international trade

If you're sure you want to work with your hands or in a craft right away:

👉 **EUD / EUD** — you'll gain skills and earn while learning, and EUD keeps your academic doors open.

💡 **Tip:** Most schools offer open house events or guidance counselors — go visit, ask questions, and see where you feel at home.

If you want, tell me about:

- your favorite subjects
 - your hobbies or dream jobs
- ... and I can help you narrow it down further! 🚀
