

# Uddannelsesvejledning efter folkeskolen

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Bulgaria. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in Danish.

What educational path would you recommend for me?

Thank you for sharing your background — that's really helpful for giving thoughtful advice! Since you're 16, just finished primary school, and fluent in Danish, you have several good educational paths to consider in Denmark depending on your **interests**, **academic strengths**, and **career goals**. Let's break it down:

## 🎒 Main educational paths after primary/lower secondary school in Denmark

### 1 Gymnasiale uddannelser (upper secondary general education)

These are academic programs that prepare you for university:

- **STX (Almen studentereksamen)** – A broad, general upper secondary program (good if you like humanities, natural sciences, social sciences, or languages).
- **HHX (Højere handelseksamen)** – Focus on business, economics, and international trade (great if you're interested in business or entrepreneurship).
- **HTX (Højere teknisk eksamen)** – Focus on technology, natural sciences, IT, and innovation (good if you like science, technology, or engineering).
- **HF (Højere forberedelseseksamen)** – A 2-year general upper secondary education, often for slightly older students or those wanting a more practical or shorter academic route to higher education.

👉 These programs typically last 2-3 years and qualify you for higher education (universities, academies, etc.).

### 2 Erhvervsuddannelser (vocational education and training)

- If you want a more hands-on, practical education leading to a trade or technical profession (e.g. electrician, carpenter, chef, healthcare assistant, graphic designer, IT technician).
- You combine school and apprenticeship (arbejdsplads) — and can often later take further education if you want.

👉 Good if you like learning by doing and want to enter the job market sooner, though you can always build on it with more study.

### 3 EUX (a combination)

- A mix of vocational training and upper secondary academic education.
- You get both a trade qualification **and** a general upper secondary exam (so you can go to university too).

👉 Ideal if you want practical skills + the option to go to university later.

## 🇩🇰 Special considerations for you

- Since you are fluent in Danish and have grown up in Denmark, you have access to the same opportunities as your peers.
- If you feel connected to your Bulgarian background, you could also look for international options, language-focused studies, or exchange programs later on.
- Think about your strengths: Do you prefer academic study, hands-on work, or a mix?
- If you're not sure yet what you want to do in the future, **STX** or **EUX** can keep many doors open.

## 💡 What you can do now

- ✅ Visit educational guidance counsellors at *ungdommens uddannelsesvejledning (UU)* — they can help you explore your options.
- ✅ Attend open house events (*åbent hus*) at gymnasiums and vocational schools to see what feels right.
- ✅ Reflect on subjects you enjoy most: languages, science, technology, arts, business?

## Example paths

- **If you like broad academic studies and aren't sure yet → STX**
- **If you like business or want to work internationally → HHX**
- **If you love science/tech → HTX**
- **If you want a faster, practical start but still want the chance for university later → EUX**
- **If you want to work with your hands, build things, or help people directly → vocational education**

If you want, I can help you:

- Explore specific schools near where you live.
- Think about your interests and strengths with a short quiz.
- Compare programs in detail.

Would you like that? 😊
