

Uddannelsesvalg efter Folkeskole

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Cyprus. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

It's great that you're thinking carefully about your next steps! Since you've just finished primary school (which in Denmark is **Folkeskole**, typically through 9th or 10th grade) and you're 16, you're at the point where you choose your **youth education** (*ungdomsuddannelse*). Let me break down your options and some things to consider.

Main educational paths after Folkeskole

1 Gymnasiale uddannelser (Upper secondary education, academically focused)

- Examples: STX (studentereksamen), HHX (business-focused), HTX (technical), HF (shorter, more flexible).
- Good if: You want to go to university or higher education later.
- Best for: People who enjoy academic subjects, theory, and general studies.

2 Erhvervsuddannelser (Vocational education and training - EUD / EUX)

- Combines school and apprenticeship (praktik) in a company.
- Examples: Carpenter, electrician, chef, healthcare assistant, etc.
- **EUX** lets you combine vocational training with the possibility to continue to higher education.
- Good if: You want to work with your hands, get practical experience, or start a career earlier.

3 Other options

- **International schools / IB (International Baccalaureate)** – good if you want a more international profile (could be relevant given your background and if you see yourself studying or working abroad).
- **Folk high schools (højskole)** – not formal education, but can be a gap year option for personal development.

Factors to consider

✓ **Your interests:** Do you enjoy academic subjects (math, languages, science, history)? Or do you prefer hands-on practical work?

- ✓ **Future goals:** Do you think you want to go to university? Or would you prefer starting a career sooner?
 - ✓ **Your strengths:** Are you good at working independently, writing essays, studying theory? Or do you like learning by doing, in real-world settings?
 - ✓ **Social environment:** Gymnasium can be more school-like, while vocational tracks put you in a workplace early on.
 - ✓ **International opportunities:** If you feel connected to Cyprus or want to keep doors open abroad, something like IB or EUX could give flexibility.
-

🌟 My general advice based on what you've shared

Since you're fluent in Danish and born/raised in Denmark, you can choose freely among the options. With your age and completion of primary school:

- 👉 If you like academic learning and think university might be in your future → **STX** or **IB** could be good choices.
 - 👉 If you want to combine practical work with the option for higher education → **EUX** is a strong path.
 - 👉 If you want to go straight into a trade or hands-on job → **EUD** could suit you well.
-

💡 Next step

I recommend:

- Talking to a **UU-vejleder** (Youth Guidance Counselor) — they can help you explore local options.
 - Visiting open house events at gymnasiums, technical schools, or vocational schools near you.
 - Reflecting on what subjects or activities excite you most.
-

If you want, tell me more about:

- 👉 What subjects or activities do you like most?
- 👉 Do you have any career ideas or dreams?
- 👉 Would you prefer to study in Denmark, Cyprus, or another country later?

That way I can give you an even more tailored recommendation! 🚀
