

Uddannelsesmuligheder i Danmark

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from North Korea. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

Thank you for sharing a bit about yourself—that's really helpful context! It's great that you're thoughtfully considering your next step. Let's break this down so I can give you a recommendation that fits your situation.

Key factors to consider

- **Your interests** – What subjects or activities do you enjoy? (e.g. science, languages, technology, arts, social work)
- **Your strengths** – What are you good at? (e.g. math, writing, practical tasks)
- **Your goals** – Do you have an idea if you want to go to university eventually, or would you prefer something more hands-on or job-oriented?
- **Lifestyle** – Do you prefer studying more academically or learning through practical work and apprenticeships?

Common options after primary school in Denmark

Since you finished primary school (9th or 10th grade), here are the main educational paths:

1 Gymnasiale uddannelser (General upper secondary education)

Ideal if you want to keep doors open for university or higher education later. Types:

- **STX (Almen studentereksamen)** – Broad, academic program (good if you like languages, history, science, etc.)
- **HTX (Teknisk studentereksamen)** – Focus on technology and science (for tech-minded students)
- **HHX (Handelsstudentereksamen)** – Focus on business, economics, and international trade
- **HF (Højere forberedelseseksamen)** – A bit shorter (2 years), for those who want a more direct route to further education

2 Erhvervsuddannelser (Vocational education & training / EUD)

If you want to learn a trade and work during your education (e.g. carpenter, chef, electrician, healthcare worker). You can often combine school with apprenticeships (praktik).

3 Kombinationsforløb (EUX)

A mix of vocational training + gymnasial level studies, so you can work as a skilled worker but also have the option for higher education.

☀️ What I'd recommend

Since you're fluent in Danish and finished primary school in Denmark, you have the same opportunities as your peers. My recommendation depends on your interests:

✅ If you want to keep many doors open (e.g. university or professional school later)

👉 Consider **STX**, **HTX**, or **HHX**.

- **STX** if you like a broad education (literature, languages, history, sciences)
- **HTX** if you like technology, science, or engineering
- **HHX** if you like business, economy, or entrepreneurship

✅ If you want to get into the workforce faster or prefer practical learning

👉 Consider **EUD** or **EUX**

- **EUD** if you already have a clear idea of a trade you want (e.g. mechanic, chef, social care assistant)
- **EUX** if you want both practical skills and academic qualifications

🌱 Other thoughts

👉 Since your family background is North Korean, you might also think about whether you'd like to combine your Danish skills with language, culture, or international studies down the road.

👉 You can also talk to a **UU-vejleder (ungdommens uddannelsesvejledning)** — they can give personal guidance and help you choose the right school.

🚀 Next steps

- Think about your interests + strengths
- Visit some **open house events** at STX/HTX/HHX/EUD schools in your area
- Talk to a UU-vejleder
- Consider doing a short internship or "brobygning" (bridging course) to test different options

If you tell me more about your interests (e.g. what subjects or activities you enjoy), I can help you narrow it down even further! Would you like help with that? 😊
