

Uddannelsesmuligheder i Danmark

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Gabon. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in Danish.

What educational path would you recommend for me?

It's great that you're thinking carefully about your next step—this is an exciting time with lots of possibilities! Since you've finished primary school (folkeskolen) in Denmark and are fluent in Danish, you have several good educational paths ahead of you. Let's break down the main options and some things to consider:

🎓 Main educational options after primary school in Denmark

1 Gymnasiale uddannelser (General upper secondary education)

If you want to keep many doors open — especially if you might want to go to university later — this could be a good choice.

- **STX (studentereksamen)** – broad academic program, good for university preparation.
- **HHX (higher commercial exam)** – focus on business, economics, and international trade.
- **HTX (higher technical exam)** – focus on science, technology, and design.
- **HF (higher preparatory exam)** – shorter (2 years), good if you want a more practical/straightforward path to higher education.

👉 **Best if:** You like academic subjects, enjoy studying, and may want to go to university or higher education.

2 Erhvervsuddannelser (Vocational education and training - EUD)

These programs combine school with apprenticeship (praktik) in a company. You can train to become, for example, an electrician, carpenter, chef, hairdresser, or health care assistant.

- You earn money during the apprenticeship.
- Many vocational programs now also offer *EUX* — a combined vocational + academic program that allows you to qualify for higher education while learning a trade.

👉 **Best if:** You prefer learning by doing, want to enter the job market faster, or are interested in a specific trade or profession.

3 Other options

- **10th grade (10. klasse)** – if you want more time to decide, strengthen your skills, or improve grades.

- **International programs** – some schools offer International Baccalaureate (IB), which is taught in English and recognized worldwide. Might be interesting if you're thinking of international studies or work.

How to choose?

Here are some questions to help guide your choice:

- Do you enjoy studying theoretical subjects (math, history, languages, science)?
- Do you prefer practical, hands-on learning?
- Do you think you want to go to university?
- Are you interested in business, technology, arts, social sciences, health, or something else?

My advice for you

- ✓ If you like academic subjects and want to keep university open as an option: **STX** or **HHX** could be good paths (STX is broader, HHX has a business focus).
- ✓ If you like technical subjects and maybe want to work with science, design, or technology: **HTX** could fit you well.
- ✓ If you're eager to learn a trade and start working (and earning!) sooner: look into **EUD** or **EUX**.
- ✓ If you're unsure and want time to mature or explore, consider **10th grade** — maybe at a **efterskole** (a type of boarding school where you can focus on special interests like sports, music, or design).

If you'd like, I can help you:

- Explore specific programs in your area
- Match your interests to potential careers
- Learn about scholarships or support for students with your background

Would you like help narrowing it down further based on your interests? 😊
