

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Georgia. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

Thanks for sharing a bit about yourself—that helps a lot in giving a useful answer. Since you've just finished primary school in Denmark (which typically ends at 9th or 10th grade), your next step is usually **upper secondary education (ungdomsuddannelse)**. The best path for you depends on your interests, strengths, and what kind of future you imagine for yourself. I'll walk you through your main options and give recommendations based on different goals:

🎓 If you're interested in university later:

You'll want to go for a **general upper secondary education**. These are your two main options:

1. **STX (Studentereksamen)** – More academic and broad; includes Danish, history, sciences, social sciences, and languages. Ideal if you're interested in university but unsure about a specific direction.
2. **HHX (Higher Commercial Examination)** – Focuses on business, economics, and international trade. Good if you're interested in business, finance, or marketing.

✅ Recommended if you:

- Enjoy academic subjects
- Are considering university
- Might be interested in law, medicine, science, politics, economics, or languages

🔧 If you're interested in a practical career or job sooner:

Look into **vocational education and training (EUD/erhvervsuddannelse)**. This is hands-on and prepares you for a specific job, such as electrician, carpenter, hairdresser, IT technician, etc.

✅ Recommended if you:

- Prefer practical, hands-on work
- Want to start working earlier
- Are interested in trades, crafts, or technical fields

Note: You can still go to university later through “EUX,” which combines vocational training with more academic studies.

👤 A hybrid path: HTX (Higher Technical Examination)

Focuses on science, technology, and innovation. Great if you're into computers, design, engineering, or natural sciences.

✓ **Recommended if you:**

- Like math, science, or technology
 - Want a technical or engineering career
 - Might want to go to university in those fields later
-

Some things to think about:

- What subjects do you enjoy the most?
 - Do you want to study at a university or start working earlier?
 - Would you enjoy a classroom-focused or more practical environment?
 - Are you thinking of staying in Denmark long-term, or maybe working internationally?
-

My suggestion (based on what you've shared):

Since you're fluent in Danish and have completed school here, you're well-prepared for any of the upper secondary paths. If you're **not sure yet**, **STX** is usually the safest and most flexible choice—it keeps a lot of doors open. If you already know you like business, then **HHX** could be better. If you're more into practical skills or want to work sooner, **EUD or EUX** is a great option.

Would you like help deciding based on your favorite subjects or career ideas? I can help narrow it down more if you tell me what you're most interested in.
