

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Germany. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

Thanks for sharing your background! Living in Denmark with German roots and being fluent in Danish gives you some excellent options — both locally and internationally. Since you've just finished primary school (typically around 9th or 10th grade in Denmark), you're at a key decision point. Here are the most common educational paths in Denmark after primary school, along with some personalized recommendations based on your situation:

🎓 Main Educational Paths in Denmark After Primary School

1. Gymnasium (STX, HTX, HHX) – Upper Secondary School

These are 3-year academically focused programs that prepare you for university.

- **STX (Studentereksamen):** General academic focus — great if you enjoy humanities, sciences, or languages.
- **HTX:** Focus on technology and natural sciences — ideal if you're into engineering, IT, or science.
- **HHX:** Business and economics — great for future business studies or working in finance.

✅ **Recommendation:** If you're academically inclined and maybe thinking about university later, one of these is a strong choice. STX might suit you best if you like a mix of subjects and want to keep your options open.

2. EUX or EUD – Vocational Education

These are practical, job-focused programs that combine school and apprenticeships.

- **EUD:** Pure vocational training — fast entry into the workforce (crafts, trades, hospitality, etc.).
- **EUX:** Combines vocational training with academic subjects — lets you work or go to university afterward.

✅ **Recommendation:** If you're more hands-on and want a career in a trade (e.g., electrician, carpenter, chef, etc.) but still want the option of further study, **EUX** is very flexible.

3. International Baccalaureate (IB)

An internationally recognized high school program taught in English.

✅ **Recommendation:** Since you have German heritage and may consider studying or working internationally, **IB** could be a great fit — especially if you're strong in English and open to studying

abroad later. There are IB schools in Denmark.

How to Choose — Questions to Ask Yourself:

- Do you enjoy more academic or practical learning?
- Are you considering university in Denmark or abroad?
- Are you interested in science, business, languages, arts, or something else?
- Do you want to start working soon, or study for longer?

Bonus Tip: Leverage Your German Roots

Since your parents are German, you could also:

- Consider **studying or working in Germany** later — knowing German and Danish is a huge asset.
- Look for **exchange programs** between Denmark and Germany or EU-funded options like **Erasmus+**.
- Consider **German-speaking IB or international programs** if you're confident in German too.

Recommended Steps:

1. **Visit open house events (åbent hus)** at local gymnasiums and vocational schools.
2. **Speak with a guidance counselor** (Studievejleder) — they can help based on your interests.
3. Try a **“brobygning” or “praktik” week** (bridge-building internships) to experience different study paths before choosing.

If you tell me more about your interests (subjects you like, careers you're curious about), I can give even more specific advice!
