

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Hungary. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

That's a really exciting point in your life—congrats on finishing primary school! In Denmark, you have several solid educational paths ahead of you after **Folkeskole**, depending on your interests, goals, and how you like to learn. Here's a breakdown of the main options and how you might think about them:

♦ 1. Gymnasiale uddannelser (General Upper Secondary Education)

These prepare you for university.

STX (Studentereksamen)

- **Focus:** Broad academic subjects (sciences, humanities, languages, arts).
- **Best for you if:** You enjoy general academic learning and may want to attend university later.
- **Pros:** Good for keeping all options open.
- **Cons:** Theoretical, less hands-on.

HTX (Higher Technical Examination)

- **Focus:** Science, technology, and technical subjects.
- **Best for you if:** You're interested in tech, IT, or engineering.
- **Pros:** Still qualifies you for university, but more STEM-focused.
- **Cons:** Less humanities and arts.

HHX (Higher Commercial Examination)

- **Focus:** Business, economics, and marketing.
- **Best for you if:** You're interested in business, trade, or entrepreneurship.
- **Pros:** Great base for business school or starting your own company.
- **Cons:** Less science and general academic variety.

HF (Higher Preparatory Examination)

- **Focus:** Shorter, more flexible program (2 years).
- **Best for you if:** You want a more adult-oriented, practical, or second-chance path.
- **Pros:** Easier if you're not a fan of school routines.
- **Cons:** Fewer years, so less time to figure things out.

♦ 2. Erhvervsuddannelser (Vocational Education and Training - EUD)

This is for learning a **trade** or **craft** and working earlier.

- **Examples:** Electrician, carpenter, chef, mechanic, hairdresser, IT support.
- **Best for you if:** You like working with your hands, or want a practical job sooner.
- **Structure:** School + apprenticeship with a company.
- **Pros:** Paid during apprenticeship, quicker path to job.
- **Cons:** Less academic/theoretical; university is harder (though still possible).

♦ 3. Kombinationsforløb (eux)

A **hybrid** between vocational training and general education.

- **You get both:** A skilled trade **and** the qualifications for university.
- **Best for you if:** You want practical skills but don't want to close the door to uni.
- **Example:** Become a certified electrician *and* qualify for engineering studies later.

So what should you choose?

Let's match options to some common goals or traits:

Your Interests / Goals	Recommended Path
Want to go to university, unsure of major	STX
Like science, tech, or engineering	HTX
Business, economics, maybe own a company	HHX
Want a trade, practical work experience	EUD
Want a trade and keep uni open	EUX
Need more flexible or shorter schooling	HF

Extra Considerations:

- **Language skills:** If you're fluent in both Danish and Hungarian, consider **language or international studies** (especially in STX).
- **Cultural background:** Your Hungarian roots can be a strength in international or European-focused programs.
- **Explore before deciding:** Many schools offer **intro weeks**, open houses, or trial days—go to them!
- **Talk to your school counselor** (studievejleder). They can guide you based on your grades and interests.

Would you like help narrowing down based on your interests (like subjects you enjoy or jobs you imagine having)? I can also help compare two paths more closely if you're torn between them.
