

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Indonesia. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.
What educational path would you recommend for me?

Thanks for sharing a bit about yourself—that helps a lot in giving you the best possible advice.

At 16 in Denmark, you've likely just completed **folkeskolen** (primary and lower secondary education), so now you're at a natural decision point. Here are your **main educational options**, and I'll also give you thoughts based on your background and possible interests:

1. Gymnasiale Uddannelser (General Upper Secondary Education)

This path prepares you for **university** later on.

Main types:

- **STX (Studentereksamen)** – General academic focus (humanities, sciences, social studies).
- **HHX** – Focus on business, economics, and international trade.
- **HTX** – Technical/science-focused with more hands-on labs and innovation.
- **HF** – A 2-year alternative for students who want a shorter, more focused academic route.

✓ Good if:

- You enjoy academic subjects like languages, science, or social studies.
- You want to keep your options open for university.
- You're not sure yet what you want, but might want a bachelor's degree.

 Since you're fluent in Danish and presumably also know some Indonesian, STX or HHX could be great. HHX might even connect your background to international business and trade.

2. Erhvervsuddannelser (Vocational Education and Training – VET)

This is for learning a **profession** (like electrician, carpenter, chef, IT specialist, health care worker) while combining school with apprenticeship (praktik).

✓ Good if:

- You want a more hands-on education.
- You want to start working earlier and possibly earn while learning.

- You know what kind of job or skill you want.

💡 Did you enjoy working with your hands or solving practical problems? If so, this could be a rewarding path.

3. EUX – Combined Vocational and Academic Path

This combines a **vocational education with academic subjects**, allowing you to both **learn a trade** and be **eligible for university**.

✅ Good if:

- You want a profession but also want to keep the door open for higher education.
- You're motivated and can handle a heavier workload.

This could be a **great compromise** if you're still deciding between practical skills and future academic goals.

Other things to think about:

With your Indonesian background:

- You could explore international business, translation, diplomacy, or even cultural studies.
- You may have language skills or cultural insights that are **valuable in global careers**.

Some questions to ask yourself:

- What subjects did you enjoy the most in school?
- Do you see yourself in university, working soon, or maybe traveling or studying abroad later?
- Do you like working with people, technology, ideas, or hands?

My Recommendation:

If you're still unsure and want to keep doors open:

STX or HHX are great default options. HHX might give you a more applied feel with international business and economics.

If you already know you prefer **hands-on** or technical work, check out:

EUX (a strong combo) or a direct **VET program** in a field you like.

If you tell me more about your **interests, strengths, or dream job**, I can help you narrow it down even more!
