

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Jordan. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

Thanks for sharing a bit about yourself — that helps a lot in giving useful advice. Since you're 16 and have just finished primary school (which in Denmark typically means *folkeskole* through 9th or 10th grade), you're now at the stage where you choose your next step in the Danish education system.

Here are your main educational paths after *folkeskole*, along with some guidance depending on your interests and goals:

♦ 1. Gymnasiale uddannelser (Upper Secondary Education)

These are academic programs that prepare you for university or other higher education.

Options:

- **STX (Studentereksamen):** Focus on general academic subjects (science, languages, humanities).
- **HTX (Teknisk studentereksamen):** More technical and science-oriented (technology, IT, engineering-related subjects).
- **HHX (Højere handelseksamen):** Focus on business, economics, marketing.
- **HF (Højere forberedelseksamen):** A shorter, 2-year program for students who may prefer a different route than STX.

Recommended if:

- You enjoy academic learning and think you might want to go to university.
- You're interested in fields like medicine, law, engineering, or business.

♦ 2. Erhvervsuddannelse (Vocational Education and Training - EUD)

This is a mix of school and paid internships. You learn a trade and often go straight into the workforce.

Fields include:

- Electrician, carpenter, mechanic
- Healthcare assistant
- Chef, hairdresser, IT support, etc.

Recommended if:

- You prefer hands-on, practical work.

- You want to start earning earlier.
- You're not interested in university right now, but may want to take the *eux* route (which combines EUD with academic subjects so you can still go to university later).

♦ 3. EUX – The best of both worlds

A combination of vocational training and academic classes. You get both a trade and the qualifications to apply for higher education.

Recommended if:

- You're not sure if you want to go to university but want to keep the option open.
- You like practical work *and* academic learning.

☀ Some questions to ask yourself:

1. **Do I enjoy school and studying subjects like science, languages, or humanities?**
 - → Consider **STX**, **HTX**, or **HHX**.
2. **Do I prefer learning by doing (practical work)?**
 - → Consider **EUD** or **EUX**.
3. **Do I want to go to university later?**
 - → Choose a path like **STX**, **HTX**, **HHX**, or **EUX**.
4. **Do I want to start working earlier, possibly earning money while learning?**
 - → EUD or **EUX** is a good fit.

🌍 Extra tip (based on your background):

Being fluent in Danish and also having a multicultural background (Jordanian heritage) is a big strength. That can be a real asset in areas like:

- International business (HHX)
- Medicine, nursing, or psychology (STX → University)
- Social work, teaching, or public administration (HF or STX → higher education)
- Tech or engineering (HTX → technical university)

If you want, I can help you explore what each specific school in your area offers, or even help you compare STX vs HTX vs HHX based on your interests. Would you like to tell me what subjects you enjoy or what kind of career you imagine for yourself?
