

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Latvia. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

Thanks for sharing a bit about yourself — that context helps a lot! Since you're 16, fluent in Danish, and just finished primary school in Denmark, you're at a typical transition point in the Danish education system. I'll walk you through some common paths and help you consider which one might be best for you based on your interests, goals, and background.

🎓 Your Main Options After Primary School (Folkeskole) in Denmark

1. Gymnasium (STX, HHX, HTX, or HF) – Upper Secondary Education

This is the academic path and takes 2–3 years. It prepares you for university or other higher education.

- **STX (Almen gymnasium)** – General upper secondary. Focus on humanities, natural sciences, and social studies. Good if you're unsure or want broad options for university.
- **HHX (Handelsskole)** – Focuses on business, economics, and international trade. Ideal if you're interested in business or entrepreneurship.
- **HTX (Teknisk gymnasium)** – Focus on science, technology, and IT. Great if you enjoy subjects like physics, biology, or programming.
- **HF (Højere Forberedelseseksamen)** – A shorter 2-year program that is a bit more practical, often for those who didn't follow a traditional school path or want to enter social work, teaching, etc.

● **Recommended if:** You enjoy academic subjects, want to go to university, or need more time to figure out what you like.

2. EUD/EGU – Vocational Education and Training

These programs mix school and apprenticeship (praktik) in a real job. After 2–5 years, you'll be a skilled worker (faglært) in areas like:

- Carpentry
- Mechanics
- Electrician
- Hairdressing
- Hospitality
- Healthcare assistance

● **Recommended if:** You enjoy hands-on work and want to start earning earlier, possibly with the option to take further education later (e.g., *Erhvervsakademi*).

3. **Kombineret forløb / Produktionsskole / FGU (Forberedende Grunduddannelse)**

If you're unsure or need a bit more time or support before starting formal education, this could be a good bridge year. It's flexible and can include practical experience, projects, or general skill-building.

 **Recommended if:** You feel uncertain, need a slower pace, or want to explore your interests with less pressure.

Questions to Help You Choose

Try to reflect on some of these:

- Do I enjoy academic subjects like math, languages, or science?
- Do I prefer practical work, like building, designing, or helping people?
- Do I want to go to university someday?
- Would I rather start working sooner and learn on the job?
- What do I see myself doing in 5 or 10 years?

My Advice Based on Your Background

Since you've grown up in Denmark, speak fluent Danish, and just finished primary school here, **you're in a strong position** to succeed in any of the Danish education tracks.

If you're academically curious or unsure but want to keep your options open:

 **STX or HHX** might be your best choice.

If you're interested in business, especially with an international perspective (Latvian background can help!):

 **HHX** is very relevant.

If you like technical or science-related subjects:

 **HTX** gives you that practical-academic mix.

If you want to work earlier and get a skilled profession:

 **EUD** might be a strong fit (for example, electrician, mechanic, chef, etc.).

If you're unsure and want a safe space to explore:

 **FGU** or even a bridge year can be valuable.

Would you like to tell me a bit more about your interests, hobbies, or what school subjects you liked or disliked? I can give you a more personalized suggestion based on that.
