

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Lebanon. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.

What educational path would you recommend for me?

Thanks for sharing that — it gives a helpful picture of where you're at. Since you've just finished **primary school in Denmark** and you're 16, the next steps usually fall within the Danish **youth education system (ungdomsuddannelser)**. There are several solid options, and what's best depends on your **interests, strengths, and future goals**.

Here's an overview of your main options after primary school:

1. Gymnasiale uddannelser (General Upper Secondary Education)

These are academic programs that prepare you for university or other higher education. They usually last **3 years**.

Options include:

- **STX** (Alment gymnasium): Broad academic focus — good if you're interested in humanities, sciences, or social studies.
- **HHX** (Handelsskolens gymnasium): Business- and economics-focused — ideal if you're into trade, business, or entrepreneurship.
- **HTX** (Teknisk gymnasium): Technical and science-oriented — great for future engineers, IT specialists, or designers.
- **HF** (Højere Forberedelseseksamen): 2-year program — more flexible, often for slightly older students or those who prefer a different structure.

● **Choose this if:** You enjoy academic subjects, want to keep university as an option, and aren't yet sure about a specific career path.

2. Erhvervsuddannelser (Vocational Education and Training / EUD)

These programs combine **school and apprenticeship** in a company. They prepare you directly for a job (e.g., electrician, hairdresser, carpenter, healthcare assistant, IT supporter).

● **Choose this if:** You prefer hands-on learning and want to enter the job market faster or become skilled in a specific trade.

🔧 **Bonus:** There's also **EUX**, which combines vocational training with academic studies — so you can both get a trade and be eligible for university later.

3. What to consider when choosing

Ask yourself:

- Do I prefer practical or theoretical learning?
 - Am I more social sciences, science, or creative-oriented?
 - Do I already know what kind of job or career interests me?
 - Would I want to go to university, or would I prefer to work sooner?
-

And as someone with a Lebanese background...

Your multilingual and multicultural background can be a huge asset. Depending on your interests, you could:

- Use language/cultural skills in **international business, diplomacy, or translation**.
 - Help others through **social work, teaching, or psychology**.
 - Work in **tech or engineering**, which are very in demand globally.
 - Enter healthcare, which is always looking for people with cultural understanding and empathy.
-

My Recommendation (based on what you've said):

Since you're fluent in Danish, just finished primary school, and are still young, I'd recommend:

- **STX or HHX** if you're academically inclined and want to keep doors open.
- **EUX** if you want to combine school with real job experience but still keep the option for higher education.

Would you like help narrowing it down based on your interests (e.g., business, science, helping people, technology)?
