

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Liechtenstein. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.
What educational path would you recommend for me?

That's great—you're in an exciting place in life where you get to shape your future. Since you've just finished primary school in Denmark (which ends at 9th or 10th grade), you're probably deciding between different upper secondary education options. Here's a breakdown to help you choose based on your interests and goals:

Main Upper Secondary Education Options in Denmark

1. STX – Gymnasium (General Upper Secondary Education)

- **Focus:** Broad academic education: languages, humanities, social sciences, natural sciences.
- **Length:** 3 years.
- **Best for:** If you want to go to university and aren't sure what to study yet.
- **Good if you enjoy:** Reading, writing, debating, exploring broad topics.

2. HTX – Higher Technical Examination Programme

- **Focus:** Technology, science, and technical subjects.
- **Length:** 3 years.
- **Best for:** If you're into IT, engineering, or applied sciences.
- **Good if you enjoy:** Math, physics, computers, tech innovation.

3. HHX – Higher Commercial Examination Programme

- **Focus:** Business, economics, and marketing.
- **Length:** 3 years.
- **Best for:** If you're considering careers in business, finance, or entrepreneurship.
- **Good if you enjoy:** Business, languages, global trade, numbers.

4. EUX – Vocational Education with Study Competence

- **Focus:** Combines vocational training with academic subjects.
- **Length:** About 4–5 years.
- **Best for:** If you want both hands-on job skills and a way to go to university later.
- **Good if you enjoy:** Practical work + some academic study.

5. EUD – Vocational Education and Training

- **Focus:** Learn a trade (e.g. electrician, chef, mechanic).
- **Length:** 2–4 years depending on field.
- **Best for:** If you want to enter the workforce with a specific skill.
- **Good if you enjoy:** Hands-on work, practical tasks, structured environments.

Special Note: Liechtenstein Background

- You're fluent in Danish and culturally integrated, but having a Liechtenstein background could be an advantage if you ever want to study or work in German-speaking countries.
- Learning or improving **German** could give you access to universities or apprenticeships in **Liechtenstein, Switzerland, Austria, or Germany** later on.

My Recommendation:

Here are two suggestions based on different paths:

If you're academically curious and want flexibility:

→ **Choose STX or HTX**

- These keep your options open.
- STX is more classic; HTX is more tech-oriented.
- You can always go to university afterward or take a gap year.

If you prefer learning by doing or want a job quicker:

→ **Choose EUX**

- This path is practical but still lets you go to higher education later.
- Great if you're interested in both working and studying.

Final Questions to Ask Yourself:

- Do I enjoy theory or practice more?
- Do I want to go to university?
- Do I want to start working sooner?
- Am I interested in business, tech, social sciences, or hands-on trades?

If you'd like, I can help you decide based on your interests—just tell me a bit more about what subjects you enjoy or what careers seem exciting to you.
