

I'm a 16 year old person living in Denmark. I'm born in Denmark, but my parents are from Luxembourg. I just finished primary school in Denmark and am now considering what my next step should be. I'm fluent in danish.
What educational path would you recommend for me?

That's great that you're fluent in Danish and have finished primary school in Denmark. Since you're 16, you're at an important crossroads in the Danish education system. Here's a clear breakdown of your options and some guidance based on different goals and interests.

Main Educational Paths After Primary School in Denmark

1. Gymnasiale Uddannelser (Upper Secondary Education - General)

These are academic tracks that prepare you for university.

- **STX (Studentereksamen):** Broad academic program with humanities, science, and social studies.
 - Good if you're not sure what you want yet.
- **HHX (Higher Commercial Examination Programme):** Focuses on business, economics, and international trade.
 - Great if you're interested in business or international careers.
- **HTX (Higher Technical Examination Programme):** Emphasis on science and technology.
 - Ideal for future engineers, scientists, or tech enthusiasts.
- **HF (Higher Preparatory Examination):** Shorter (2 years), more flexible.
 - Good for a quick university path or if you prefer a more practical focus.

 Best for: Students aiming for university, especially if you enjoy academic subjects and want broad future options.

2. Erhvervsuddannelser (Vocational Education and Training – EUD)

These are hands-on programs that combine school with apprenticeship.

- You can become e.g. a carpenter, electrician, chef, mechanic, or hairdresser.
- Includes EUX – a combination of vocational training and a gymnasial exam.
 - Gives both a craft qualification **and** access to university.

 Best for: If you like working with your hands, want to start working sooner, or prefer practical learning.

3. IB (International Baccalaureate)

Offered in some international schools in Denmark.

- Taught in English, globally recognized.
- Great if you think you might live or study abroad later — perhaps in Luxembourg or elsewhere.

 Best for: International-minded students or those considering studies outside Denmark.

How to Decide?

Ask yourself a few questions:

1. Do you like studying theoretical subjects (math, literature, science)?

- If yes: STX, HHX, HTX, or IB could be great.

2. Do you enjoy practical, hands-on learning?

- If yes: EUD or EUX might suit you.

3. Do you want to go to university someday?

- Then consider STX, HHX, HTX, IB, or EUX.

4. Are you interested in business, tech, or science?

- HHX = business, HTX = tech/science, STX = broad.

5. Would you prefer to start working sooner?

- Then vocational education (EUD) might be ideal.

✨ My Personal Recommendation (based on your background)

Since you're fluent in Danish, born and raised in Denmark, and just finished primary school, you have all doors open.

Assuming you're still exploring your interests, I'd recommend:

➡ **STX**: It's the broadest general upper secondary education and keeps many options open — whether you later want to go to university in Denmark, Luxembourg, or elsewhere.

BUT — if you already have a strong interest (like business or technology), then:

- Choose **HHX** (for business/economics)
- Or **HTX** (for tech/science)

If you're curious about **studying in English** or **international careers**, the **IB** might also be worth looking into.

Would you like help comparing specific schools or programs near you in Denmark? I can look that up too.
